LETTER OF TRANSMITTAL

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington, D. C., December 30, 1932.

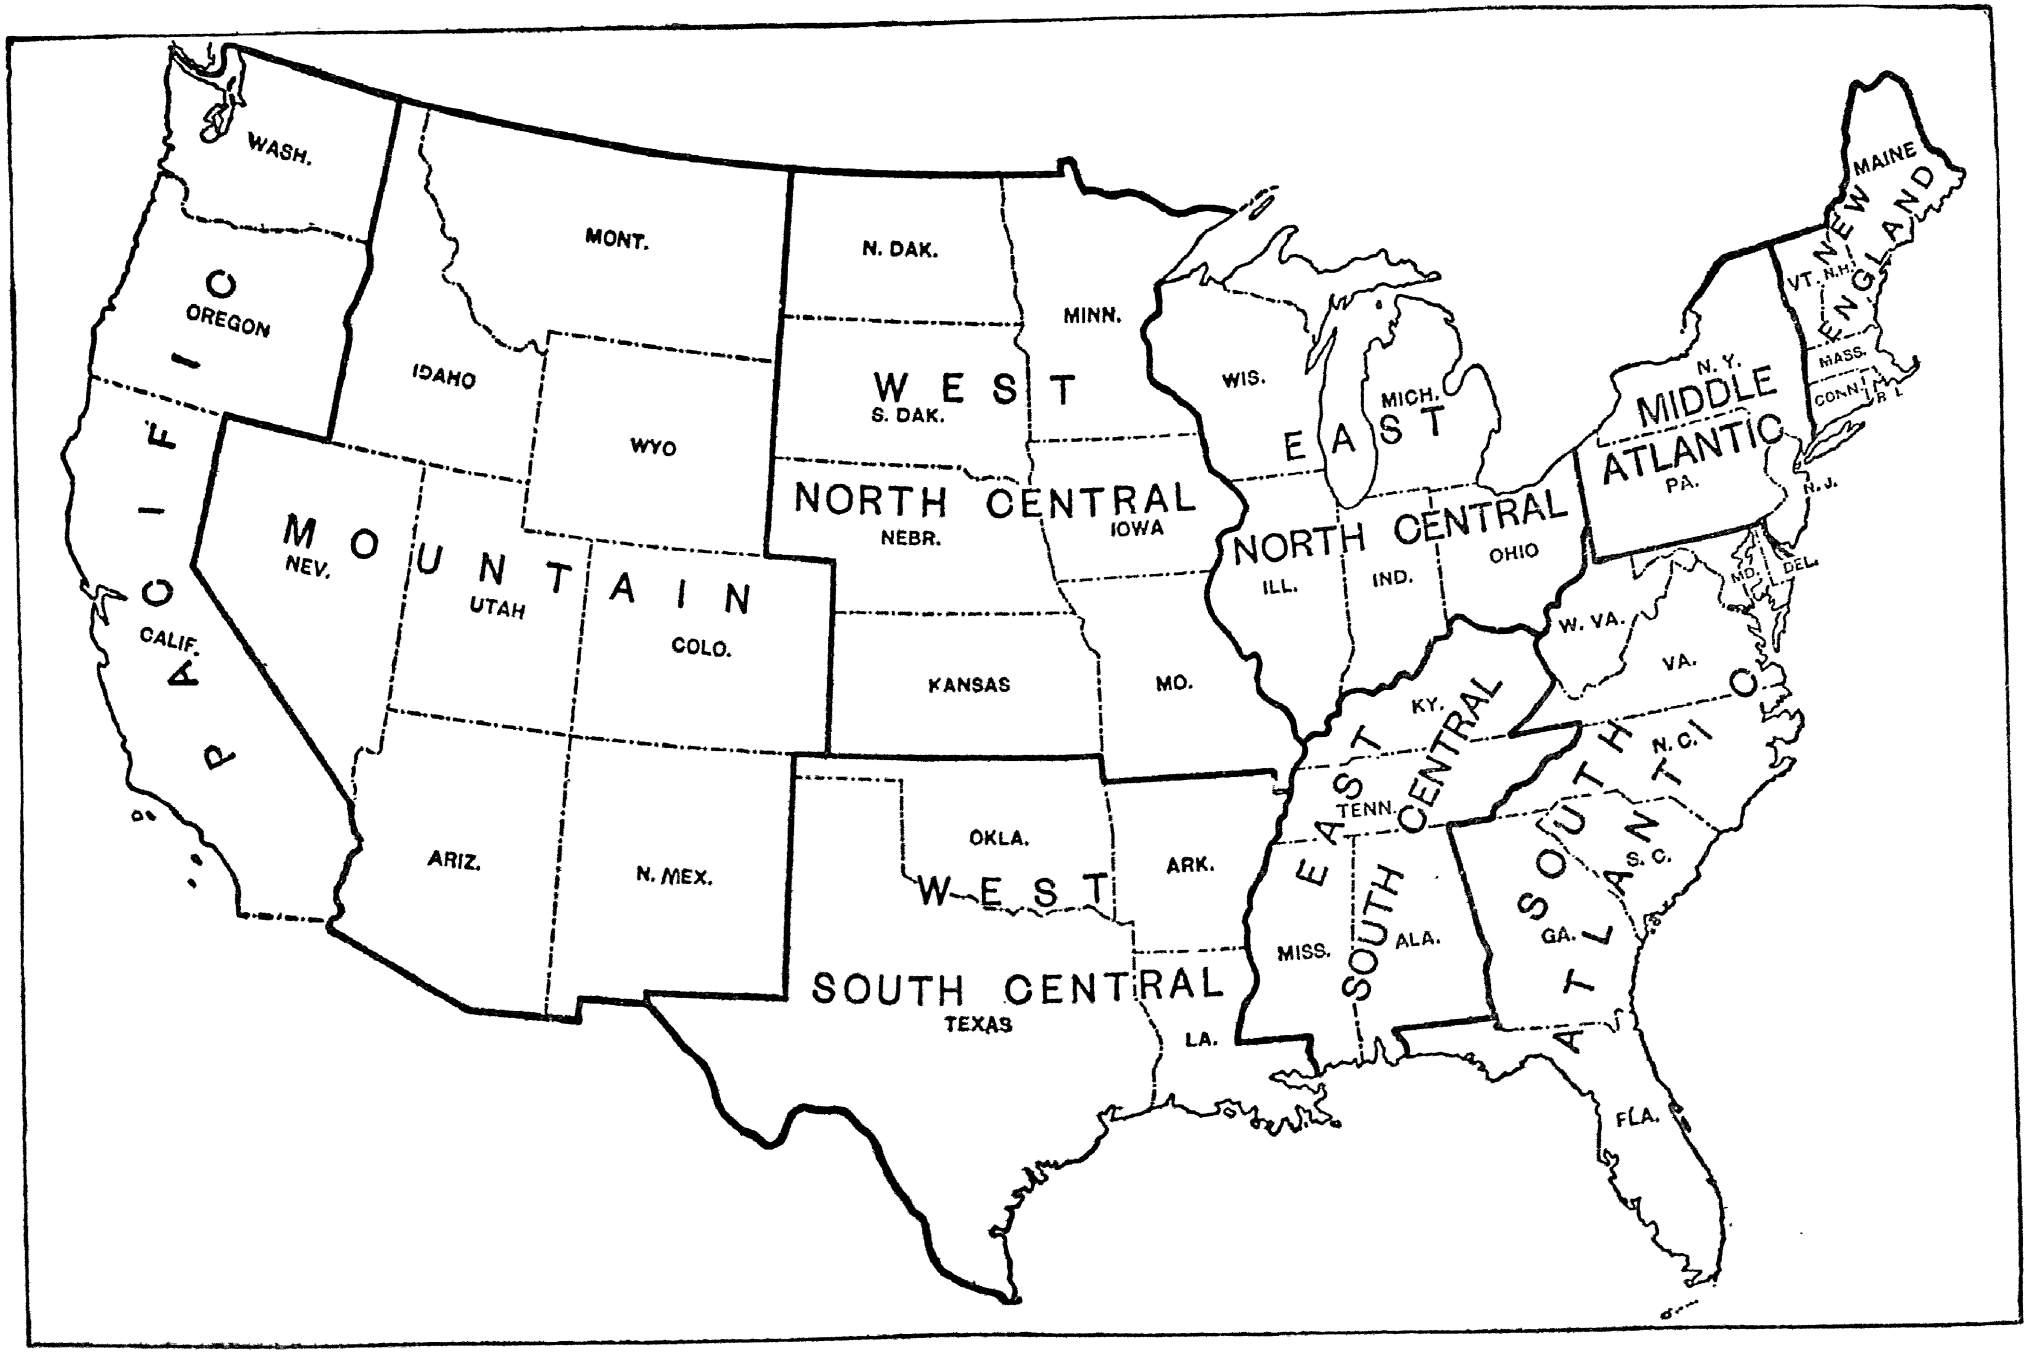
SIR:

I transmit herewith Volume II of the Fifteenth Census Reports on Population. This volume comprises 14 chapters, each presenting the statistics of population for one subject or group of related subjects, for the United States, by States, with figures for the more important cities—usually cities of 25,000 inhabitants or more—and for urban, rural-farm, and rural-nonfarm areas. Some of the subjects which appear in this volume, like State of birth of the native population and mother tongue of the foreign-born white population, are not referred to in any of the other volumes of the Fifteenth Census Reports. Other subjects, like age distribution and marital condition, are presented here in much greater detail than in Volume III, where condensed statistics are given State by State.

The census of population was taken as of April 1, 1930, in conformity with the act providing for the Fifteenth Census and for the apportionment of Representatives in Congress, approved June 18, 1929. The results of the census of population are contained in six volumes, as follows: Volume I, Number and Distribution of Inhabitants; Volume II, General Report—Statistics by Subjects; Volume III, Reports by States, Showing the Composition and Characteristics of the Population for Counties, Cities, and Townships or Other Minor Civil Divisions; Volume IV, Occupations, by States; Volume V, General Report on Occupations; Volume VI, Families. The results of the census of unemployment, which was taken in conjunction with the census of population, are contained in two volumes, as follows: Volume I, Unemployment Returns by Classes for States, Counties, and Cities; Volume II, General Report on Unemployment.

The collection and compilation of the statistics of population and unemployment, including the preparation of this volume, were under the supervision of Dr. Leon E. Truesdell, chief statistician for population, assisted by Olive M. Riddleberger, assistant chief statistician.

Respectfully,



W. M. STEUART,
Director of the Census.

Hon. ROY D. CHAPIN,
Secretary of Commerce.

GENERAL REPORT—STATISTICS BY SUBJECTS

GENERAL INTRODUCTION

Fifteenth Census Reports on Population.—The results of the count of the population returned in the 1930 census were first published in a series of State bulletins (Population, First Series) which gave the total population alone for the State and for all of its political subdivisions, including counties, townships, cities, and other incorporated places. These figures were based upon a hand count of the names returned on the schedules. As the first group of machine tabulations were completed the results were made up into another series of State bulletins (Population, Second Series) giving the population classified by color, nativity, sex, age, etc.; these data were presented in some detail for areas as small as incorporated places of 1,000 or more inhabitants.

The major part of the results of the tabulation of gainful workers by occupation were presented in a third series of State bulletins, these containing figures for the State and for all cities of 25,000 or more. The results of the family tabulation were presented in a fourth series of State bulletins, giving statistics of families for the State by counties and for incorporated places of 2,500 or more. A series of State bulletins was also issued presenting the statistics of unemployment.

Upon the completion of each of these series of State bulletins, a United States summary bulletin was published, giving for the United States figures corresponding to those shown by States, and, in addition, a number of convenient summary tables presenting the more important facts in condensed form by States and for the larger cities.

These five series of State bulletins make up the major part of Volumes I, III, IV, and VI of the Population Reports and Volume I of the Unemployment Reports, as outlined below. The separate chapters presenting statistics by subjects, which make up Volumes II and V, have likewise been published as separate bulletins.

The statistics for the outlying territories and possessions have been published in separate bulletins corresponding approximately to those issued for the States, with modifications where necessary, especially for the smaller areas. All of these reports have been consolidated and are published in a volume entitled "Outlying Territories and Possessions."

The Fifteenth Census statistics of population, including unemployment, for continental United States occupy eight volumes, as follows:

Volume I gives the number of inhabitants for the United States by States and counties and for all of their recognized political subdivisions, including townships and other similar minor civil divisions, as well as incorporated places. This volume is the only one of the series here described which contains data for the outlying territories and posessions. Volume I is made up of the First Series Population Bulletins, including a United States summary, which contains figures for the population classified as urban and rural, in addition to summarizing the totals for the United States as a whole and presenting lists of cities and other incorporated places arranged according to size, for convenient reference.

Volume II, while it gives no figures for counties or for the smaller cities, presents the statistics for States and for cities of 25,000 or more in greater detail than any of the other volumes. The material in this volume is arranged by subjects, each subject being presented, first, in a series of summary tables for the United States, then in a series of tables for States, in tables for urban, rural-farm, and rural-nonfarm population, and finally in tables for individual cities. It contains all of the published material on certain subjects, namely, State of birth of the native population; mother tongue of the foreign-born white population; year of immigration, and ability to speak English; and for many of the subjects covered in briefer fashion in Volume III it presents additional significant details. Age, for example, is shown by single years; marital condition and illiteracy are classified by age; and many of the statistics of the foreign-born white are presented by country of birth.

Volume III presents statistics for States, counties, cities, and townships, classified in varying degrees of detail by such characteristics as color, nativity, sex, age, marital condition, citizenship, etc. It contains three important features not included in the corresponding volumes of recent prior censuses. First, a detailed presentation of age by color, nativity, and sex, for counties; second, a series of tables showing the gainful workers in each county classified by sex and industry groups. Not even the number of gainful workers has heretofore been available by counties. Third, a presentation of the population by townships, classified by sex, by color and nativity, and by age. This volume is made up of the Second Series State bulletins bound together, with a United States sum-

mary of the same series. It is published in two parts, Part 1 covering the States from Alabama to Missouri, and Part 2, the States from Montana to Wyoming.

Volume IV presents the occupation data by States, including a table in which the workers in the more important occupations in the State are classified by color and nativity and by age. For each State there is presented a special section on children in gainful occupations and one on gainfully employed women, in which special stress is placed on the classification according to marital condition. This volume is made up of the State bulletins on Occupations, supplemented by a summary bulletin for the United States which gives many convenient summary tables besides presenting the United States totals.

Volume V contains a more detailed discussion of the method of classifying gainful workers according to occupation, a presentation of the occupation data by subjects (comprising sex, color and nativity, age, marital condition of occupied women, and children in gainful occupations), which is largely a rearrangement and amplification of data presented in Volume IV; and, finally, a section showing the gainful workers in each industry classified by occupation. This last section represents a very complicated tabulation, the results of which are presented in the form of United States totals only. A similar tabulation was presented in the reports for 1910,[1] but nothing of this kind was attempted in 1920.

Volume VI presents the more important of the results of the tabulation of data relating to families, including classifications by tenure of home, color and nativity and age of head of family, value or rental of home, size of family, number of children, number of gainful workers, number of lodgers, and employment status of home-maker. It contains also the statistics of dwellings, these being classified according to the number of families in each. This volume is made up of the State bulletins on families, preceded by a United States summary.[2]

Unemployment, Volume I contains the results of the first group of tabulations of the unemployment returns. Most of the data are presented for class A (persons out of a job, able to work, and looking for a job) and class B (persons having jobs but on leave without pay, excluding those sick or voluntarily idle), these two groups being classified by color, nativity, and age, by period of idleness, by reason for idleness, by family relationship, and by industry groups corresponding to those shown for gainful workers in Volume III of the Population Reports. This volume is made up of the State bulletins on unemployment, supplemented by a United States summary bulletin.

Unemployment, Volume II presents more detailed tabulations of the unemployment returns. It includes, in particular, a tabulation by occupation, far more detailed than the industry group tabulation, in which the numbers of unemployed, both class A and class B, are compared with the whole number of gainful workers returned in the same occupation. It contains also the results of the special census of unemployment taken in 19 cities in the month of January, 1931.

Census date.—Section 6 of the Fifteenth Census Act provided that the enumeration of the population should be made as of April 1, 1930. The date of the Fourteenth Census was January 1, 1920, and that of the Thirteenth Census was April 15, 1910; at previous censuses, beginning with that of 1830, the date to which the enumeration related, was June 1; and from 1790 to 1820 the census date was the first Monday in August. The change from April 15, in 1910, to January 1, in 1920, was made in deference to the wishes of the Department of Agriculture and the various interests making use of agricultural statistics. The weather during January proved to be a serious handicap to the enumerators, however, especially in the Northern States, and for this and other reasons the date was again changed in 1930 to April 1. Except as regards the classification of the population by occupation, and perhaps the classification as rural and urban or farm and nonfarm, the difference in the date probably has little effect on the statistics of population. The number of persons on farms in April of any year is somewhat larger than the number in January; and, in particular, the number of persons who will be returned as engaged in agricultural occupations will be somewhat larger in the spring than in the middle of the winter.

The work of actual enumeration began on April 2, 1930. Enumerators in incorporated places of 2,500 inhabitants or more, where the work consisted mainly of the enumeration of the population, were required to complete their canvass within two weeks from the date of beginning; and the enumerators in the smaller towns and villages and in the country districts, partly because of the greater area which they had to cover and partly because they collected data on agriculture as well as on population, were allowed 30 days. By far the larger part of the work of the enumerators was completed before the end of April, though in individual districts here and there throughout the country, extensions of time were granted, and some of the work of enumeration was done in the month of May.

Enumeration at usual place of abode.—For the country as a whole and for every State and every political subdivision within the State, the population enumerated is the resident (*de jure* rather than *de facto*) population. The enumerators, under the census law, were instructed to enumerate all persons at their "usual place of abode"—that is, at their permanent

[1] Vol. IV of the Thirteenth Census Reports, Table IV.

[2] Additional details with respect to families, whose tabulation was not completed in time for their inclusion in the regular census reports, are to be presented in a series of supplemental bulletins or special studies.

homes or regular lodging places. Hence, persons were not in all cases counted in the places where they happened to be found by the enumerator; in particular, they were not by any means all counted in the place where they transacted their daily business. Thus it happens that the business or industrial population of all important cities includes considerable numbers of persons who are not counted as a part of their census population. Such persons transact their daily business or perform their daily work, spend a considerable proportion of their incomes, and perhaps even eat all or a part of their meals in these cities, but have their lodging places outside the municipal limits and are there enumerated.

Persons temporarily absent from their usual places of abode—for example, on visits, on business, traveling for pleasure, attending school or college, or sick in hospitals—were enumerated at the places where they habitually reside, information regarding them being obtained from members of their families or from acquaintances. Persons having no fixed place of abode anywhere, however, were enumerated at the place where they were found by the enumerator, arrangements usually being made to enumerate the whole floating population in a given city on one specified day in order to avoid duplication. Special arrangements were made, involving the use of what was termed an "absent family schedule," for obtaining the correct census returns where whole families were absent from their usual place of abode at the time of the enumeration.

The Fifteenth Census Act.—The Fifteenth Census was taken under an act approved June 18, 1929, which incorporated certain modifications of the Fourteenth Census Act, though it followed the same general plan. This act, which was entitled, "An Act to provide for the Fifteenth and subsequent decennial censuses and to provide for the apportionment of Representatives in Congress," designated the three years beginning with the first day of January in the decennial year as the "Decennial Census Period," and provided for an expansion during that period of the force of the permanent Census Bureau in Washington, and for the creation of a special field force to collect the census data. It contained also (as none of the previous census acts had done) a definite provision for reapportionment of representation in the House of Representatives on the basis of the census returns.

The subjects covered by the Fifteenth Census included all the principal subjects covered by the Fourteenth Census except manufactures, which was taken in 1930 under the regular authorization for the biennial census of manufactures. The Fifteenth Census thus included the traditional subjects of population, agriculture (including irrigation and drainage), and mines and quarries, and in addition, two important new subjects, namely, distribution, which was handled by a new main division of the Census Bureau, set up for the purpose, and unemployment, which was handled in connection with the census of population.

The specific questions to be covered by the census of population were not stated in the law, but were left to be determined by the Director of the Census, with the approval of the Secretary of Commerce. In accordance with this provision a general population schedule was prepared, a copy of which appears as Appendix A. This was supplemented by an unemployment schedule, a copy of which appears as an appendix to Volume II of the Unemployment Reports. All of the information used in the population census was obtained from these two schedules, including the data for the special tabulation relating to families, though the family information was first taken off on an intermediate sheet called a family transcription sheet.

The census enumerators were supplied with printed instructions as to the method of filling out the schedule and as to the manner of determining what persons should, and what persons should not, be enumerated in their respective districts. A copy of these instructions is presented as Appendix B.

The actual tabulation was made through the use of three sets of punched cards. The general population card carried all of the information relating to individuals, including industry and occupation for gainful workers; the family card, punched from the transcription sheet referred to above, contained all the information relating specifically to families, including the number of dwellings and the tenure of homes; and the unemployment card contained the information from the unemployment schedule.

Explanatory text.—The various chapters in this volume contain very little text other than that of an explanatory character which might be needed to enable the reader to understand fully the data presented in the statistical tables. Practically no attempt has been made at analytical or interpretative discussion of the figures, since such discussion would have involved considerable delay in the publication of the results of the Fifteenth Census.

Geographic divisions.—In addition to the presentation by States, statistics are given for nine groups of States which are designated "Geographic divisions." (See map, p. VI.) The States comprising each of these divisions are for the most part fairly homogeneous in physical characteristics as well as in the characteristics of their population and in their social and economic conditions, whereas each division differs more or less sharply from most of the others in these respects. Even in tables where no totals are shown for the geographic divisions the States are usually arranged in the order required for their grouping into divisions. The advantage of this geographic arrangement lies chiefly in the ease with which comparisons can be made between

States in the same section and between a group of States in one part of the country representing one set of conditions and another group of States representing another set of conditions.

Comparative and derivative figures.—For each subject covered by this volume there is presented a summary table for the United States as a whole giving statistics from all earlier censuses at which comparable data were compiled. Where there were material differences in method of collecting statistics or other factors affecting their comparability, these are explained in notes. In the main, however, the presentation of comparative statistics is limited, partly as a matter of economy in space, to the last two or three censuses. The distribution of the population under all of the important classifications is shown in the form of percentages, which are often of great assistance in comparing the data for different areas or for different census years.

Maps and diagrams.—Besides the map of the United States showing the geographic divisions, there are included a considerable number of maps and diagrams which present graphically the more important statistical items brought out in the various chapters.

CHAPTER 1.—URBAN AND RURAL POPULATION, METROPOLITAN DISTRICTS, AND CENTER OF POPULATION

URBAN AND RURAL POPULATION

Among the most fundamental of the census classifications are certain groupings of the population based upon the areas in which the people live rather than upon any personal characteristics of the individuals making up the population.

The simplest of these is that which provides separate population figures for the several States and for the counties, cities, and townships within the States. This requires only the presentation of the data for these areas as they are collected, since the enumeration is of necessity made for the smallest geographic units and the results later consolidated to make up the totals for the larger areas; in fact, the results of each tabulation have been made public State by State as the work progressed, without waiting for the completion of the data for the country as a whole.

Other geographic classifications, like that distinguishing the urban and the rural population, or the farm and the nonfarm, are less obvious and more artificial in their nature. The urban-rural classification, however, has been generally accepted and widely used since it was established in its present form in 1910; and when supplemented by the subdivision of the urban population into groups of cities classified according to size, and of the rural population into farm and nonfarm, it should be of even greater service.

Throughout most of the presentations of statistics of population classified in accordance with such personal characteristics as color, nativity, sex, age, marital condition, etc., figures are given for the urban, rural-farm, and rural-nonfarm areas; and statistics are provided in such detail for individual cities that totals can readily be made up for any desired groups of urban places.

Urban and rural areas.—Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, conditions are exceptional in that the compactly built portions of the towns (townships) are not separately incorporated or politically distinct in any way from the rural territory within the same town; nor is it the usual practice to incorporate even the larger places as cities until they attain a population in excess of 10,000. Consequently, if only the cities were counted as urban the classification would be quite inadequate. In 1920 and 1910 all towns in these three States which had a population of 2,500 or more were classified as urban. This resulted in the inclusion of a considerable number of places that were mainly rural in their general characteristics. In 1930 the special rule for these New England States has been modified so as to place in the urban classification, in addition to the regularly incorporated cities, only those towns in which there is a village or thickly settled area having more than 2,500 inhabitants and comprising, either by itself or when combined with other villages in the same town, more than 50 per cent of the total population of the town.[1]

One other modification has been made in the definition of urban population for use in connection with the 1930 census. This modification extends the classification so as to include townships and other political subdivisions (not incorporated as municipalities, nor containing any area so incorporated) which had a total population of 10,000 or more, and a population density of 1,000 or more per square mile.[2]

Since it has been found impracticable to go back and readjust to the new basis the 1920 urban and rural figures as they were tabulated by color, sex, age, etc., they are presented in all tables as established in 1920. The comparative figures for a few States therefore show differences which must be considered or interpreted as solely or mainly the result of the change in the method of classification.

Table 1 shows the population of continental United States for each census from 1880 to 1930, inclusive, with separate figures for urban and rural areas, 1880 being the earliest census for which it was practicable to compile urban and rural population on the basis of the classification adopted in 1910.

[1] The result of this modification has been to transfer from the urban to the rural classification 12 towns in New Hampshire (population 35,389), 56 towns in Massachusetts (population 218,231), and 8 towns in Rhode Island (population 35,001), which would have been counted as urban if the 1920 rule had been followed in 1930. The aggregate population in 1930 of these towns which were in effect transferred from the urban to the rural classification is 288,621.

[2] This extension adds to the urban group 11 townships in New Jersey (population 208,722), 10 townships in Pennsylvania (population 210,505), 4 towns in Connecticut (population 87,086), 2 townships in California (population 48,992), and 1 town in New York (population 18,024). The aggregate population of these 28 places, which would have been classified as rural under the rules governing the urban-rural classification in 1920, is 573,329.

The net effect of the two changes in the basis of the urban-rural classification is, therefore, to increase the urban population by 284,708. In other words, if the classification had been made in 1930 on exactly the same basis as in 1920, the urban population would have been 68,670,115, instead of 68,954,823, and the percentage urban would have been 55.9 instead of 56.2.

TABLE 1.—POPULATION OF THE UNITED STATES, URBAN AND RURAL: 1880 TO 1930

AREA	1930 (Apr. 1)	1920 (Jan. 1)	1910 (Apr. 15)	1900 (June 1)	1890 (June 1)	1880 (June 1)

Farm population.—The farm population as shown for 1930 comprises all persons living on farms, without regard to occupation. The farm population figures for 1920 include, in addition, those farm laborers (and their families) who, while not living on farms, nevertheless lived in strictly rural territory outside the limits of any city or other incorporated place. Though the number of additional persons thus included is believed not to have been very great, some allowance should be made for this difference in definition when comparing the figures. Further allowance should be made for the fact that the 1920 census was taken in January, when considerable numbers of farm laborers and others usually living on farms were temporarily absent, while the 1930 census was taken in April, when by reason of the advancing season the number of persons on the farms was appreciably larger. Since these two factors operate in opposite directions, it may well be that one largely offsets the other. It seems probable, however, that the change in the date added more to the 1930 returns than were omitted through the use of the narrower definition. The classification of the population as farm and nonfarm is based on the replies to a question on the schedule, reading: "Does this family live on a farm?"

Rural-farm population.—While the urban-farm population, that is, the population living on farms within the limits of cities and other urban places, is shown in Table 2 for the United States and in Table 9 by States, it is not included in any of the detailed presentations by color, sex, age, etc. which are presented elsewhere in the Census Reports. In other words, the analysis of the farm population is limited to that part living in rural territory, which is designated in every case as "rural-farm." This is done partly to simplify the classification (dividing the total population into three groups, namely, urban, rural-farm, and rural-nonfarm); partly because the urban-farm group is so small, forming as it does less than 1 per cent of the total farm population; and partly because the few farm families resident within the corporate limits of cities or towns are living under conditions that are at least somewhat urban, rather than under typical farm conditions.

Rural-nonfarm population.—The rural-nonfarm population, sometimes termed the "village" population, includes, in general, all persons living outside cities or other incorporated places having 2,500 inhabitants or more who do not live on farms. There were included in the rural areas of the United States in 1930, 13,433 incorporated places of less than 2,500 inhabitants, with an aggregate population of 9,183,453. While there are considerable numbers of farm families living in these villages, it may be assumed that well over nine-tenths of their population was counted as rural-nonfarm. These incorporated villages therefore contribute around two-fifths of the total rural-nonfarm population (which amounted to 23,662,710); and a considerable part of the remainder live in unincorporated villages.

The rural-nonfarm or village population is much less uniform in its make-up in the different parts of the United States than either the urban population or the rural-farm population. In some sections of the country it consists mainly of the inhabitants of small manufacturing villages or of suburban areas which are not incorporated. In other sections it is made up mainly of persons living in mining settlements. In still other parts of the country, where farming is the dominant industry, it is made up largely of the inhabitants of small commercial centers, including merchants, bankers, doctors, carpenters, automobile repair men, and other persons who are mainly occupied in supplying the wants of the farm population, together with retired farmers and their families.

The classification of the urban and rural population as farm and nonfarm is shown for 1930 and 1920 in Table 2.

TABLE 2.—URBAN, RURAL-FARM, AND RURAL-NONFARM POPULATION OF THE UNITED STATES: 1930 AND 1920

[A minus sign (—) denotes decrease]

CLASS OF POPULATION	NUMBER		INCREASE		PER CENT OF TOTAL

Total farm population	30,445,350	31,614,269	—1,168,919	—3.7	24.8	29.9

Population in places of 8,000 or more.—While the present urban and rural classification, with the basic requirement of a population of 2,500 in an incorporated place in order to give it urban classification, is not available for censuses earlier than 1880, a table has been presented in the Census Reports for many decades giving the population in places of 8,000 or more back to the First Census, that of 1790. These figures are shown in Table 3.

TABLE 3.—POPULATION IN PLACES OF 8,000 OR MORE: 1790 TO 1930

CENSUS YEAR	Total population	PLACES OF 8,000 OR MORE		
		Number of places	Population	Per cent of total population

[1] Minor changes have been made in the subdivision of rural territory in Table 4 for 1920, 1910, and 1890 since the publication of Volume I, Population (see p. 14 of that report), involving the transfer of several small villages in New England from rural incorporated places to "Other rural territory," as investigation has shown that these villages never have been incorporated.

[1] Includes population of Indian Territory.

METROPOLITAN DISTRICTS

In giving the population of cities and incorporated towns and villages the Census must necessarily deal with political units, or with the population contained within the legally established limits of the city or town. In other words, the population of the city as a political unit with a definite corporate name can not properly or legitimately be anything more or less than the population within the corporate limits of the city. Any departure from this principle would lead to endless confusion.

Cities and their suburbs.—It is a familiar fact, however, that the population of the corporate city frequently gives a very inadequate idea of the population massed in and around that city, constituting the "greater" city, as it is sometimes called; and that as regards large cities in few cases do the boundaries of the city limit the urban population which that city represents or of which it is the center. The suburbs are from many standpoints as much a part of the city as the area which is under the municipal government. The suburban residents share in the economic and social activities of the city; many of them have their business or employment in the city; and to a less extent persons residing in the city are employed in the suburbs. If we are to have a correct picture of the massing or concentration of population in extensive urban areas, and of the size and relative importance of the aggregations of urban population in different parts of the country, it is necessary to establish metropolitan districts which will show the magnitude of each of the principal population centers taken as a whole, by including in a single total both the population of the central city itself and that of the suburbs or urbanized areas surrounding it—or, in some cases, the population of two or more cities which are located in close proximity and that of their suburbs.

Method of defining metropolitan districts.—The metropolitan districts for the census of 1930, as here presented, include, in addition to the central city or cities, all adjacent and contiguous civil divisions having a density of 150 inhabitants or more per square mile, and also, as a rule, those civil divisions of less density that are directly contiguous to the central cities, or are entirely or nearly surrounded by minor civil divisions that have the required density. This is essentially the same procedure as that followed in determining the metropolitan districts for cities of over 200,000 inhabitants at the censuses of 1910 and 1920, except that the area which might be included within the metropolitan district was then limited to the territory within 10 miles of the city boundary, while no such limit is now applied.

Ninety-six metropolitan districts have been established, each having an aggregate population of 100,000 or more and containing one or more central cities of 50,000 or more inhabitants. No metropolitan district was established for those cities which did not have in the central city and surrounding area a population of at least 100,000. The metropolitan districts are designated by the name of the central city, or in those cases where the area includes two or more important cities no one of which can properly be regarded as the central or dominant city, by the combined names of such cities. The total population and area and the population density of these 96 metropolitan districts are shown in Table 11. The location of the various districts is indicated on the accompanying map by a series of circles so drawn that their areas are in proportion to the size (population) of the districts which they represent.

While the aggregate area of the metropolitan districts is only 1.2 per cent of the total land area of the United States, the population of these districts is nearly 45 per cent of the total population of the United States. It may be noted that the suburban area outside of the central cities represents almost nine-tenths of the entire area of the metropolitan districts and that the population of the outside area comprises over three-tenths of the entire population of the districts.

Additional statistics for these metropolitan districts, including figures for the individual places making up the "outside area" in each case, and classifications of the population by color and nativity, by sex, and by age, are presented in a 253-page publication entitled "Metropolitan Districts." [3]

CENTER OF POPULATION

The term "center of population" as used by the Census Bureau has a somewhat technical significance different from that frequently attached to it in popular usage. The center is often understood to be the point of intersection of a north and south line which divides the population into two equal parts, with an east and west line which likewise divides it into two equal parts. The point of intersection of two such lines is more accurately designated "median point," and this term has been used in Census reports to distinguish it from the point technically defined as the center of population.

The center of population may be said to represent the center of gravity of the population. If the surface of the United States be considered as a rigid level plane without weight and the population distributed thereon, all individuals being assumed to have equal weight, the point on which this plane would balance would be the center of population. This pivotal point would be the center of gravity of the hypothetical plane; and its location would be affected not only by the numbers of persons on the different parts of the plane, but also by the distance of each individual from the "center." [4]

The computations for the center of population are made for continental United States, omitting Alaska and the other outlying territories and possessions.

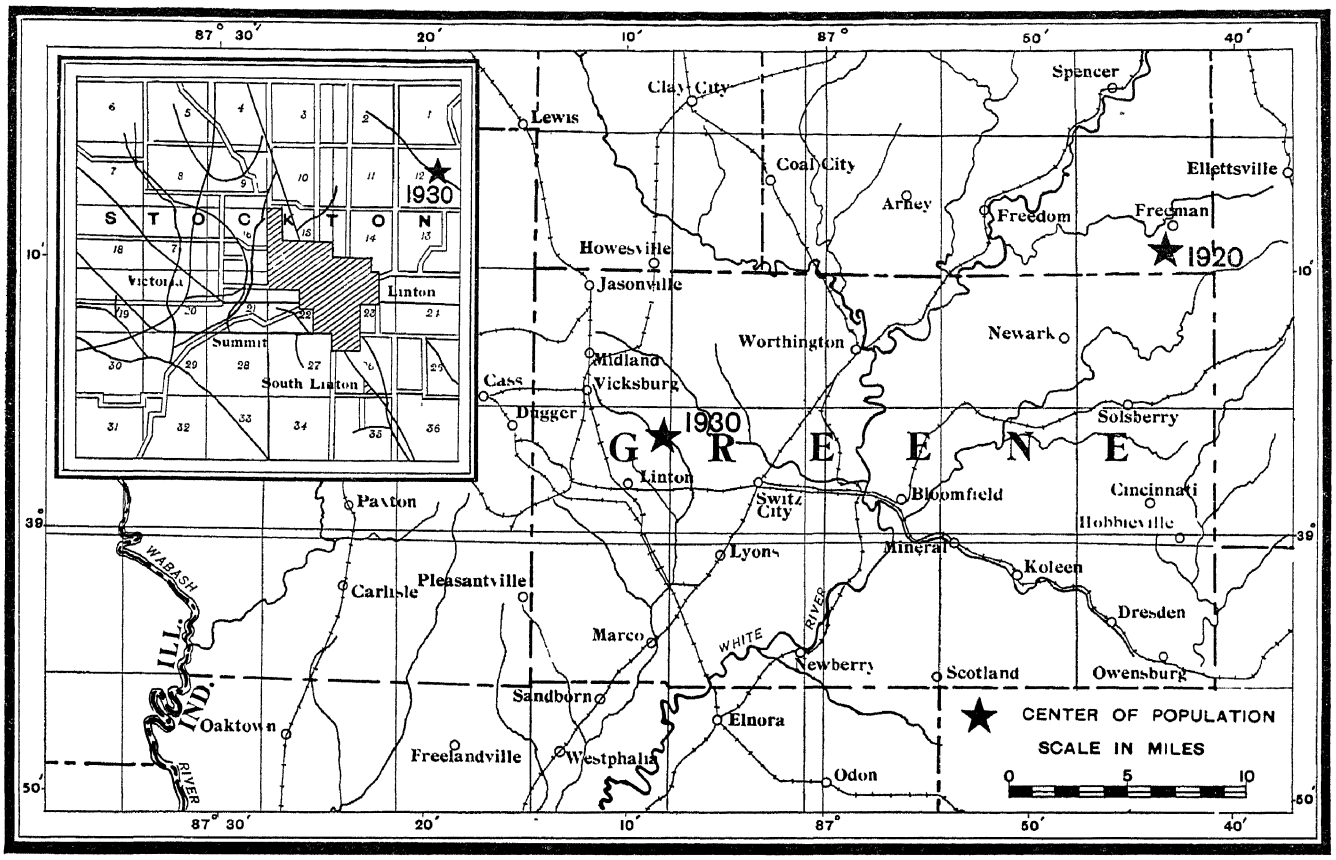
On the basis of returns for the Fifteenth Census, taken as of April 1, 1930, the center of population was found to be in latitude 39° 3′ 45″ north and longitude 87° 8′ 6″ west. This point is in southwestern Indiana, 2.9 miles northeast of Linton, Stockton township, Greene County, Ind., as shown on the first map on the opposite page.

During the decade from 1920 to 1930 the center of population moved west 24′ 51″, or approximately 22.3 miles. The advance towards the west is to a large extent due to the increase in the population of the Pacific Coast States, their distance from the center giving any increase of population in those States much greater weight than an equal increase in the populous States of the East which are nearer the center.

Location of center at earlier censuses.—The location of the center of population at each Federal census from 1790 to 1930 is shown in Table 12, and also represented on the second map.

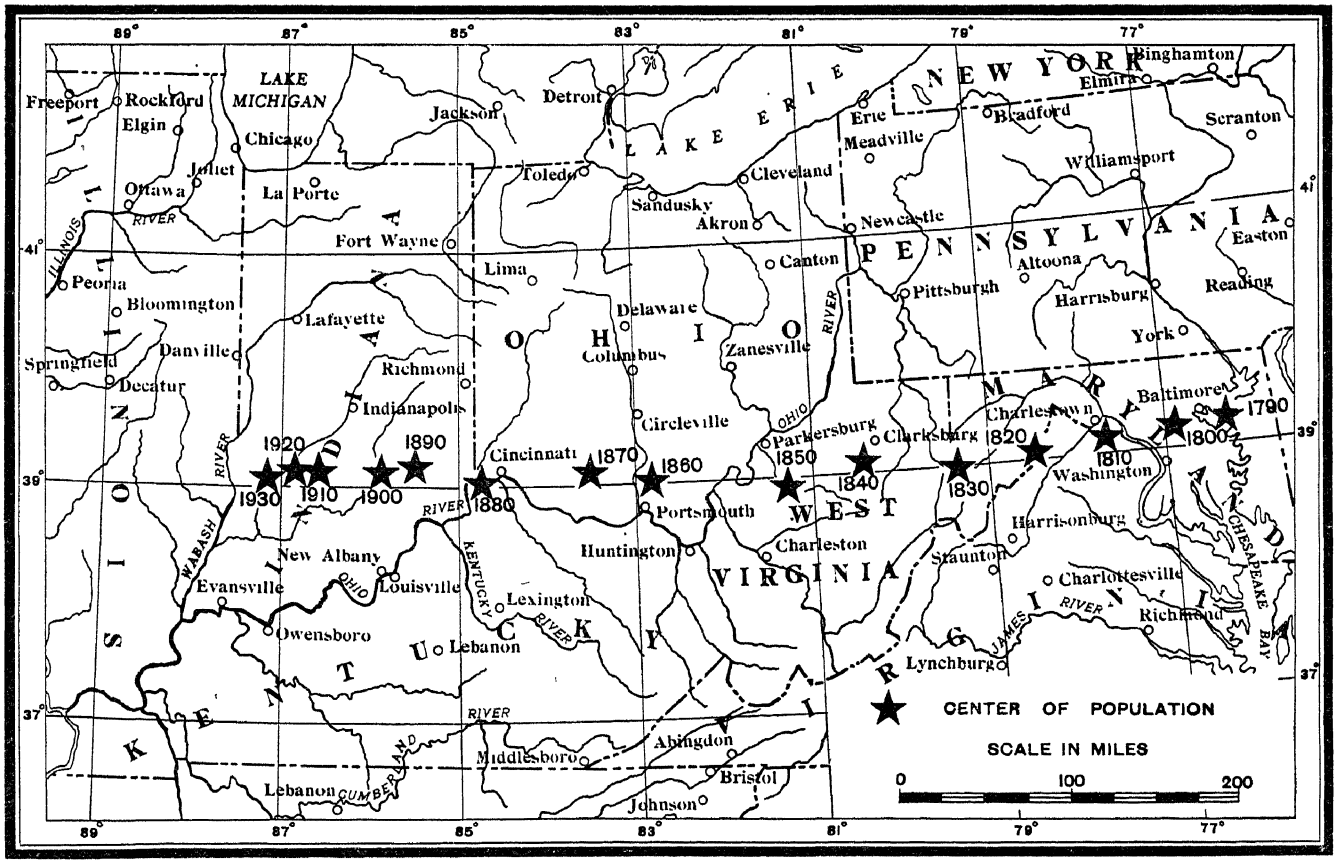
TABLE 12.—POSITION OF THE CENTER OF POPULATION: 1790 TO 1930

CENSUS YEAR	North latitude	West longitude	Approximate location by important towns	MOVEMENT IN MILES DURING PRECEDING DECADE			
				From point to point in direct line	Westward	Northward	Southward
	° ′ ″	° ′ ″					
1790	39 16 30	76 11 12	23 miles east of Baltimore, Md				
1800	39 16 6	76 56 30	18 miles west of Baltimore, Md	40.6	40.6		0.5
1810	39 11 30	77 37 12	40 miles northwest by west of Washington, D. C. (in Virginia)	36.9	36.5		5.3
1820	39 5 42	78 33 0	16 miles east of Moorefield, W. Va.[1]	50.5	50.1		6.7
1830	38 57 54	79 16 54	19 miles west-southwest of Moorefield, W. Va.[1]	40.4	39.4		9.0
1840	39 2 0	80 18 0	16 miles south of Clarksburg, W. Va.[1]	55.0	54.8	4.7	
1850	38 59 0	81 19 0	23 miles southeast of Parkersburg, W. Va.[1]	54.8	54.7		3.5
1860	39 0 24	82 48 48	20 miles south by east of Chillicothe, Ohio	80.6	80.6	1.6	
1870	39 12 0	83 35 42	48 miles east by north of Cincinnati, Ohio	44.1	42.1	13.3	
1880	39 4 8	84 39 40	8 miles west by south of Cincinnati, Ohio (in Kentucky)	58.1	57.4		9.1
1890	39 11 56	85 32 53	20 miles east of Columbus, Ind	48.6	47.7	9.0	
1900	39 9 36	85 48 54	6 miles southeast of Columbus, Ind	14.6	14.4		2.8
1910	39 10 12	86 32 20	In the city of Bloomington, Ind	39.0	38.9	0.7	
1920	39 10 21	86 43 15	1.9 miles west of Whitehall, Clay Township, Owen County, Ind.; 8.3 miles south-southeast of Spencer, Washington Township, Owen County, Ind.	9.8	9.8	0.2	
1930	39 3 45	87 8 6	2.9 miles northeast of Linton, Stockton Township, Greene County, Ind	23.6	22.3		7.6



[1] West Virginia was set off from Virginia Dec. 31, 1862; admitted as a State June 19, 1863.

In the period of 140 years, from 1790 to 1930, the center of population advanced westward 591 miles from its position in 1790, 23 miles east of Baltimore. The progress westward from census to census has been uninterrupted, being greatest—80.6 miles—during the decade 1850–1860, and least—9.8 miles—during the decade 1910–1920. The net advance southward during this period of 140 years was only 15.1 miles.



[4] In making the computations for the location of the center of population it is necessary to assume that the center is at a certain point. Through this point a parallel and a meridian are drawn, crossing the entire country. In making the computations for 1930, the same point was selected as in 1920; this intersection was assumed to be where the parallel of 39° north latitude intersects the meridian of 86° west longitude, which lines were taken as the axes of moments.

The product of the population of a given area by its distance from the assumed parallel is called a north or south moment, and the product of the population of the area by its distance from the assumed meridian is called an east or west moment. In calculating north and south moments the distances are measured in minutes of arc; in calculating east and west moments it is necessary to use miles, on account of the unequal length of the degrees and minutes in different latitudes. The population of the country is grouped by square degrees—that is, by areas included between consecutive parallels and meridians—as they are convenient units with which to work. The population of the principal cities is then deducted from that of the respective square degrees in which they lie and treated separately. The center of population of each square degree is assumed to be at its geographical center except where such an assumption is manifestly incorrect; in these cases the position of the center of population of the square degree is estimated as nearly as possible. The population of each square degree north and south of the assumed parallel is multiplied by the distance of its center from that parallel; a similar calculation is made for the principal cities; and the sum of the north moments and the sum of the south moments are ascertained. The difference between these two sums, divided by the total population of the country, gives a correction to the latitude. In a similar manner the sums of the east and of the west moments are ascertained and from them the correction in longitude is made.

14. White and Negro population, 1930 and 1920, and per cent Negro, 1850 to 1930, by divisions and States 38
15. Native and foreign-born population, 1930 and 1920, and per cent foreign born, 1850 to 1930, by divisions and States 39
16. Native white population of mixed parentage, by nativity of father and mother, by divisions and States: 1890 to 1930 40
17. Native and foreign-born population by color or race, by divisions and States: 1930, 1920, and 1910 41
18. Population by color, nativity, and parentage, by divisions and States: 1890 to 1930 46
19. Color and nativity, by divisions and States: 1850 to 1930 53
20. Population of the minor races other than Mexican, by nativity, by States: 1930, 1920, and 1910 58
21. Color, nativity, and parentage for the urban, rural-farm, and rural-nonfarm population, by States: 1930 and 1920 60
22. Negro and Mexican population by nativity, and total number of Indians, Chinese, and Japanese, in the urban, rural-farm, and rural-nonfarm population, by States: 1930 65

Principal Cities

23. Native and foreign-born population by color or race, for cities of 100,000 or more: 1930, 1920, and 1910 67
24. Population by color, nativity, and parentage, for cities of 100,000 or more: 1930 and 1920 73
25. Native white population of mixed parentage by nativity of father and mother, for cities of 100,000 or more: 1930 79
26. Population of the minor races other than Mexican by nativity, for cities of 100,000 or more: 1930, 1920, and 1910 80
27. Population by color, nativity, and parentage, for cities of 25,000 to 100,000: 1930 and 1920 82

CHAPTER 2.—COLOR OR RACE, NATIVITY, AND PARENTAGE

INTRODUCTION

The classification of the population of the United States by color or race distinguishes in many cases only three main groups, namely, white, Negro, and "Other races." The "Other race" group includes Mexican, Indian, Chinese, Japanese, Filipino, Hindu, Korean, Hawaiian, Malay, Siamese, and Samoan, the last three represented by less than 100 persons each.

In classifying the population by nativity, all persons born in continental United States or in any of the outlying territories or possessions are regarded as native and all other persons as foreign born. In the classification by parentage there are three primary groups, as follows: (1) Native parentage, that is, having both parents born in the United States or in the outlying possessions; (2) Foreign parentage, that is, having both parents foreign born; (3) Mixed parentage, that is, having one parent native and the other foreign born. In many of the tables persons of foreign parentage and those of mixed parentage are combined into one group designated "Foreign or mixed parentage." Conversely, in a few tables the mixed parentage group is separated into two parts, designated (*a*) Father foreign, and (*b*) Mother foreign.

The distinction as to parentage is generally confined to the native white population, so that in most of the tables there are five principal classes: (1) Native white of native parentage; (2) Native white of foreign or mixed parentage; (3) Foreign-born white; (4) Negro; (5) Other races. The number of classes is expanded to six in many cases by the separate presentation of native white of foreign parentage and native white of mixed parentage. The group designated "Other races," being relatively unimportant in most areas, is frequently omitted from the tables altogether. Figures are presented, however, for this group and for its constituent races—Mexicans, Indians, Chinese, Japanese, etc.—in separate tables containing such details in each case as the number of persons in the group seems to justify.

Statistics of color or race, nativity, and parentage are presented in this chapter for continental United States, by States, and for cities of 25,000 or more. Less detailed statistics are presented for counties and townships, and for incorporated places of 1,000 or more, in Volume III of the Fifteenth Census Reports on Population; and statistics for the outlying territories and possessions enumerated at the Fifteenth Census are presented in a volume entitled "Outlying Territories and Possessions."

The 1930 figures for the various color or race groups are shown by nativity in Table 1.

TABLE 1.—POPULATION OF THE UNITED STATES BY COLOR OR RACE AND NATIVITY: 1930

[Per cent not shown where less than 0.1 or where base is less than 100]

COLOR OR RACE	Total population	NATIVE		FOREIGN BORN		PER CENT DISTRIBUTION		
		Number	Per cent of total	Number	Per cent of total	Total	Native	Foreign born

Siamese	18	7	------	11	------	------	------	------
Samoan	6	6	------	----------	------	------	------	------

Correction for 1870.—The corrected figures for 1870 in Table 4 and for the decades 1860 to 1870 and 1870 to 1880 in Table 5 are based on estimates of the true population in 1870, the census taken in that year having been generally deficient in the Southern States. The number of omissions in these States in 1870 is estimated to have been 1,260,000, comprising 748,000 whites and 512,000 Negroes. (See Reports of the Eleventh Census, Population, Pt. I, pp. xi, xii, and xvi.)

White population.—The proportion of whites in the total population, which was a little over 80 per cent in 1790, has increased at each succeeding census, except for a slight decline in 1810 as compared with 1800 and a decrease from 89.0 per cent (for the white population excluding Mexicans) in 1920 to 88.7 per cent in 1930 (see Table 4). This last decline is the result of a very considerable influx of Mexicans between 1920 and 1930. If Mexicans had been classed as white in 1930, the proportion would have been slightly higher than in 1920.

Accepting the estimate for 1870 as approximately correct, each decade since 1790, except the decade 1910 to 1920, has shown for the white population a numerical increase greater than for the decade immediately preceding; and the percentage of increase for the white population has exceeded that for the Negro population in every decade since 1810 (see Table 5).

In considering the growth of the white population it must be kept in mind that in the case of only one of the four nativity and parentage classes is the increase

due in any measure to the excess of births over deaths within the class itself. The number of natives of native parentage is increased in part by the children born to natives of native parentage and in part by the children of the natives of foreign or mixed parentage; the number of natives of mixed parentage is increased by the children of intermarriages between the native and the foreign born; the number of natives of foreign parentage, by the children born to immigrants after their arrival in this country; and the number of foreign born, by immigration.

Of the four classes of whites, therefore, the natives of native parentage constitute the only one whose increase is affected in any degree by its own reproductivity, since the children born in this country to each of the other classes belong to a class different from that to which their parents belong (except that in some cases one parent of a native of mixed parentage is also a native of mixed parentage). While the increase in the number of native whites of native parentage must, so long as there is any element of foreign birth or parentage in the population, necessarily exceed the natural increase by excess of births over deaths within this class, the numerical increase of any of the other classes may or may not exceed the natural increase which would result if the children were included in the same class with the parents. The numerical increases within the several nativity and parentage classes, therefore, bear no specific relationship to the natural increase.

The 1930 figures for the white population classified by nativity and parentage are summarized in Table 2. For comparative figures for earlier censuses, see Table 6.

TABLE 2.—WHITE POPULATION OF THE UNITED STATES BY NATIVITY AND PARENTAGE: 1930

NATIVITY AND PARENTAGE	Number	Per cent of total population	Per cent of white population	Per cent of native white population
Total white	108,864,207	88.7	100.0	
Native	95,497,800	77.8	87.7	100.0
Native parentage	70,136,614	57.1	64.4	73.4
Foreign or mixed parentage	25,361,186	20.7	23.3	26.6
Foreign parentage	16,999,221	13.8	15.6	17.8
Mixed parentage	8,361,965	6.8	7.7	8.8
Father foreign	5,459,530	4.4	5.0	5.7
Mother foreign	2,902,435	2.4	2.7	3.0
Foreign born	13,366,407	10.9	12.3	

Negro population.—The distinction between white and colored is the only racial classification which has been carried through all the 15 censuses. There is some doubt as to whether the small number of taxed Indians were counted with the white or with the colored population prior to 1860.

With adjustment for the undercount of Negroes in 1870, the proportion of Negroes in the total population has decreased at each census since 1810. The rate of increase in the Negro population has also shown a downward trend since 1810, but the rates, even with adjustment for 1870, show fluctuations which are difficult to explain. For example, the rate of increase dropped from 22.0 per cent (adjusted) in the decade 1870 to 1880 to 13.5 per cent between 1880 and 1890, and then rose to 18.0 per cent in the following decade.

In the face of this fluctuation in the decennial rate of increase, the Census Bureau has admitted the possibility of an undercount of Negroes in 1890. A similar fluctuation in the rate of increase was that from 11.2 between 1900 and 1910 to 6.5 in the decade 1910 to 1920, followed by a rate of 13.6 between 1920 and 1930. This fluctuation is even greater than that of 30 years earlier, and suggests the probability of an undercount of Negroes in 1920, as well as in 1890. It would be a mistake, however, to assume that the entire fluctuation in the latter period was due to an undercount. The decade 1910 to 1920 included the years of the World War, with its consequent disorganization of the Negro population through military service and labor migrations, and also the influenza epidemic of 1918 and 1919. The disorganization of the War and migration period would tend to decrease births, and the epidemic probably increased the number of deaths of Negroes within the decade by at least 100,000. The number of deaths in the decade 1910 to 1919 of Negroes living at the census of 1910, on the assumption that the death rate of Negroes in the registration area was typical of that for Negroes in the United States as a whole, was 1,754,956, as compared with 1,522,665 Negro deaths similarly calculated for the decade 1920 to 1929 in the population living at the census of 1920. A comparison by five-year age periods of the Negro population in 1910, 1920, and 1930, arranging these periods by groups of birth years and allowing for calculated deaths in each birth-year group, would indicate a shortage of about 150,000 in the Negro enumeration of 1920, as compared with the enumerations of 1910 and 1930. This shortage in the enumeration is in addition to the usual shortage of perhaps 100,000 in the enumeration of Negro children under 5 years old. This latter shortage can be shown for every census by comparing the number of children under 5 with the number 10 to 14 in the following census, taking into account deaths within the 10-year period.

The following statement shows the rates of increase in the Negro population for the last six decades, first, as reported, and second, with the adjustments suggested above:

DECADE	As reported	Adjusted
1920–1930	13.6	12.0
1910–1920	6.5	8.0
1900–1910	11.2	11.2
1890–1900	18.0	13.8
1880–1890	13.5	17.6
1870–1880	34.9	22.0

The rapid downward trend in the decennial rate of increase in the Negro population from 1870 to 1920 can only be accounted for by the assumption of a declining birth rate, parallel with the decline which has been recorded for the white race. The Negro

death rate apparently remained stationary or declined less rapidly than did the birth rate. In the decade 1920 to 1930, both birth and death registration figures for Negroes are for the first time sufficiently complete to be used as a check on the indicated decennial increase. These figures show that during the decade the Negro death rate declined more rapidly than the Negro birth rate. This offers an explanation of the apparent reversal in the trend of the rate of increase. Whether this reversal is temporary or permanent remains to be seen.

Mexican population.—The Mexican element in the population has increased very rapidly in certain parts of the United States during the past 10 years. By reason of its growing importance, it was given a separate classification in the census returns for 1930, having been included for the most part with the white population at prior censuses. The instructions given to enumerators for making this classification were to the effect that "all persons born in Mexico, or having parents born in Mexico, who are not definitely white, Negro, Indian, Chinese, or Japanese, should be returned as Mexican." Under these instructions, 1,422,533 persons were returned as Mexican in 1930, and 65,968 persons of Mexican birth or parentage were returned as white. Using as a basis the 1920 returns for persons born in Mexico and persons having one or both parents born in Mexico, it has been estimated that there were in that year 700,541 persons who would have been classified as Mexican under the 1930 instructions.[1] Similarly it was estimated that there were included in the white classification in 1910, 367,510 persons who would have been counted as Mexican in 1930.

Indian population.—The census of 1860 was the first at which Indians were distinguished from the other classes, but no enumeration was made of the Indians in Indian Territory or on Indian reservations until 1890. Prior to that time the enumeration of Indians was confined to those found living among the general population of the various States. The returns for Indians are subject to some degree of uncertainty because of the practice of treating as Indians all persons having any trace of Indian blood. Such persons in many cases can not be distinguished by their appearance from pure-blooded white persons, and as a result some of them have doubtless been reported as white at one census and as Indian at another, since the enumerators are not always able to interview directly the persons whom they enumerate but are obliged to secure information regarding them from other persons.

At the census of 1910 a special effort was made to secure a complete enumeration of all persons having any perceptible amount of Indian blood, for the purpose of preparing a special report showing tribal relation, degree of Indian blood, etc.; and it is probable that this resulted in the enumeration as Indian of a considerable number of persons who would ordinarily have been reported as white. In 1920 no special instructions were given to the enumerators on this point, and the returns showed a much smaller number of Indians than in 1910.

In 1930, however, a special effort was again made to secure a complete count of persons of Indian blood, and the enumerators were instructed specifically to return as Indian all persons of mixed white and Indian blood, except where the percentage of Indian blood was very small, or where the person was regarded as white in the community where he lived. The results of this enumeration show 87,960, or 36.0 per cent, more Indians than were returned in 1920, but for reasons already indicated, it seems likely that this figure overstates the actual increase in the number of Indians.

Urban, rural-farm, and rural-nonfarm population.—Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, towns (townships) are classified as urban if they have a population of 2,500 or more and certain urban characteristics; and a few large and densely populated townships in other States are likewise classified, even though not formally incorporated as municipalities.

In addition to the classification of the population as urban and rural, the rural population is further subdivided into rural-farm and rural-nonfarm, on the basis of the replies to a question reading "Does this family live on a farm?" The rural-farm population includes all persons living on farms in the rural areas. The rural-nonfarm or "village" population is made up largely of persons living in small towns or villages both incorporated and unincorporated, though in many areas there are considerable numbers of families living in the open country but not on farms.

The population of the United States distributed by color or race is shown for these urban and rural areas in Table 3.

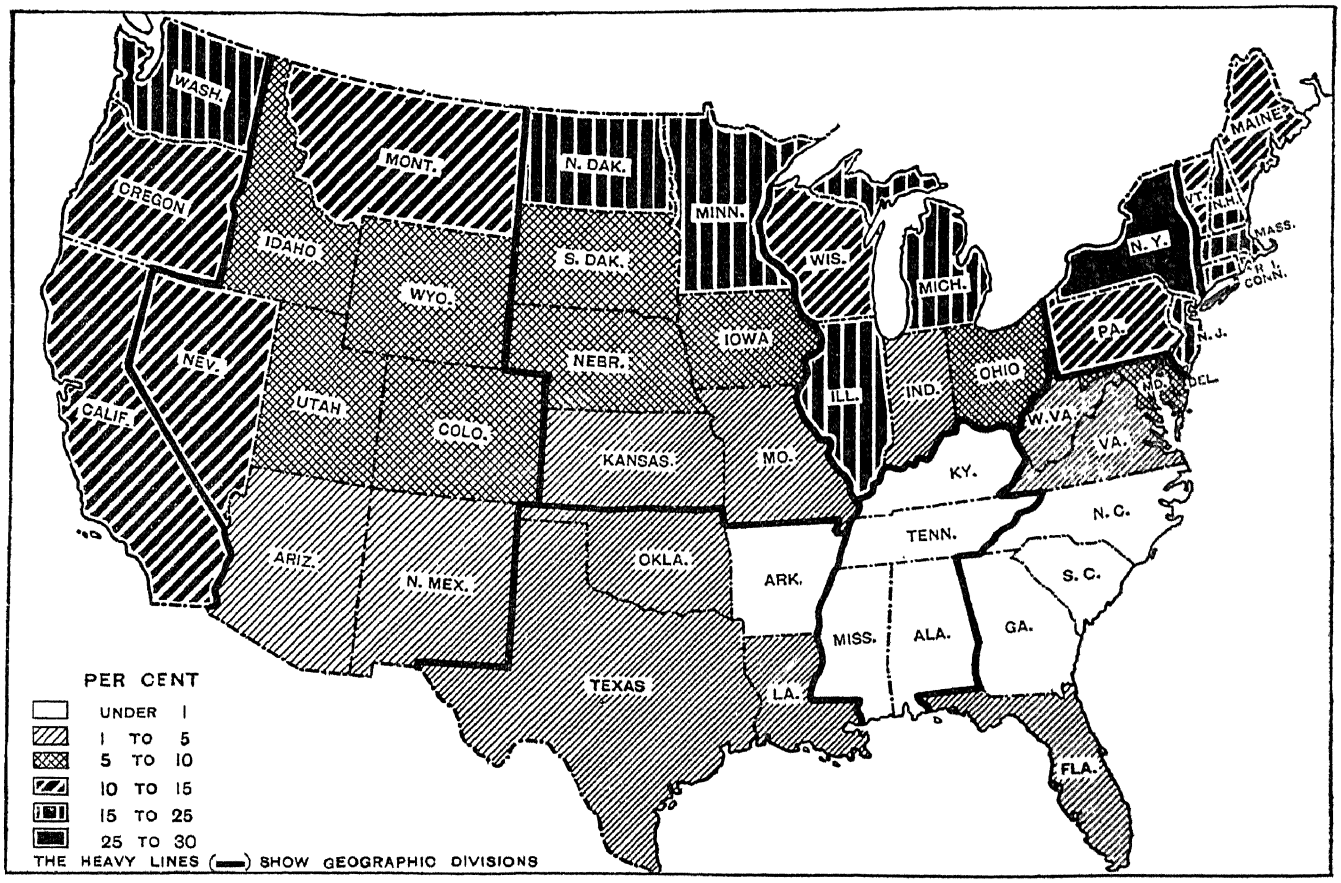

TABLE 3.—URBAN, RURAL-FARM, AND RURAL-NONFARM POPULATION OF THE UNITED STATES, BY COLOR, NATIVITY, AND PARENTAGE: 1930

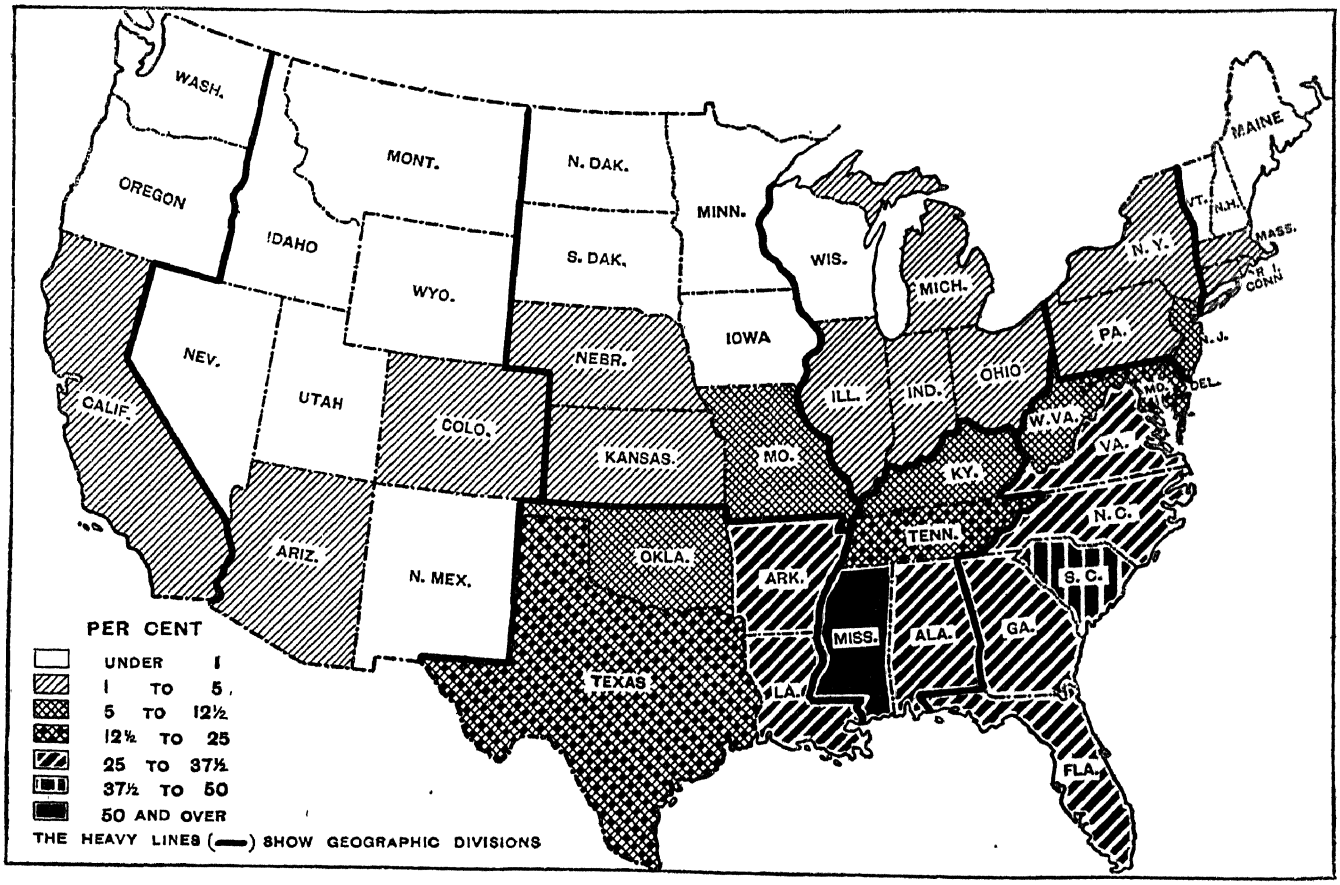
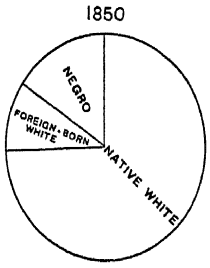
COLOR, NATIVITY, AND PARENTAGE	Total population	Urban	Rural-farm	Rural nonfarm
All classes	122,775,046	68,954,823	30,157,513	23,662,710
White	108,864,207	62,836,605	24,884,834	21,142,768
Native	95,497,800	52,109,746	23,800,747	19,587,307
Native parentage	70,136,614	33,497,232	20,495,382	16,144,000
Foreign or mixed parentage	25,361,186	18,612,514	3,305,365	3,443,307
Foreign parentage	16,999,221	12,959,015	1,953,554	2,086,652
Mixed parentage	8,361,965	5,653,499	1,351,811	1,356,655
Foreign born	13,366,407	10,726,859	1,084,087	1,555,461
Negro	11,891,143	5,193,913	4,680,523	2,016,707
Mexican	1,422,533	723,428	341,411	357,694
Indian	332,397	32,816	188,946	110,635
Chinese	74,954	65,778	3,211	5,965
Japanese	138,834	74,675	46,186	17,973
Filipino	45,208	24,414	10,735	10,059
Hindu	3,130	1,297	1,273	560
Korean	1,860	1,250	330	280
All other	780	647	64	69

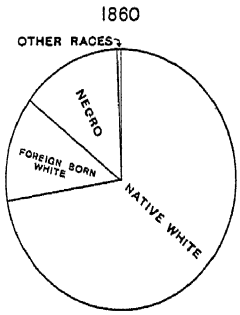
[1] This estimate is based on the assumption that the ratio between white persons of Mexican birth or parentage and persons who should be classified as "Mexicans" was the same in 1920 as in 1930, when the total number of persons of Mexican origin (1,488,501) comprised 1,422,533 Mexicans and 65,968 white persons of Mexican birth or parentage. The total number of white persons of Mexican birth or parentage in 1920 was 731,559.



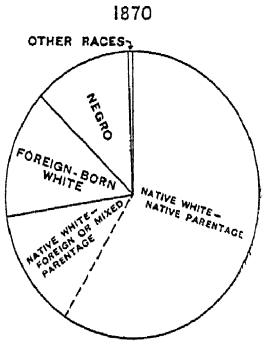
PERCENTAGE OF FOREIGN-BORN WHITE IN THE TOTAL POPULATION, BY STATES: 1930

[District of Columbia, 6 1 per cent, not shown separately on the map]

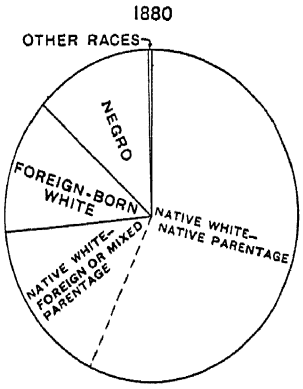


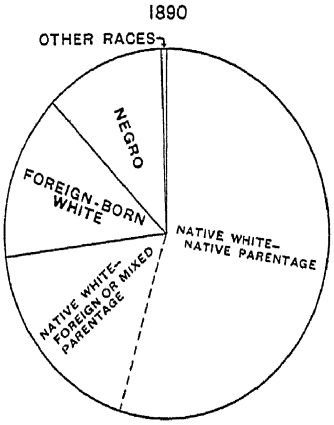


PERCENTAGE OF NEGROES IN THE TOTAL POPULATION, BY STATES: 1930

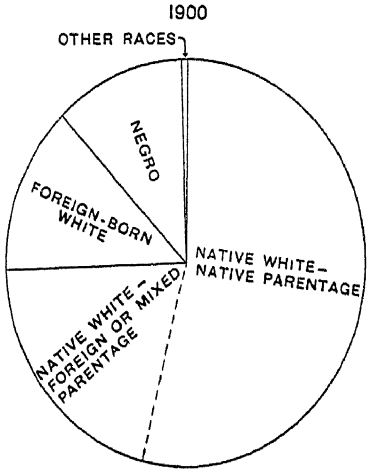


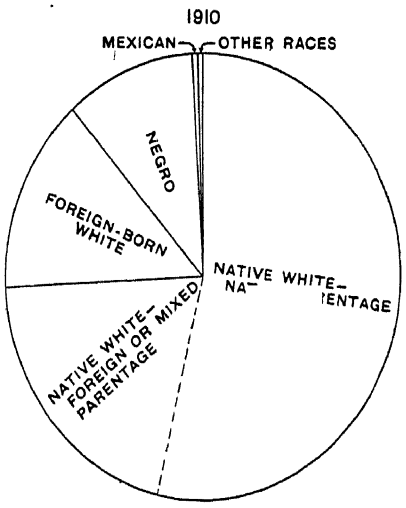
[District of Columbia, 27.1 per cent, not shown separately on the map]

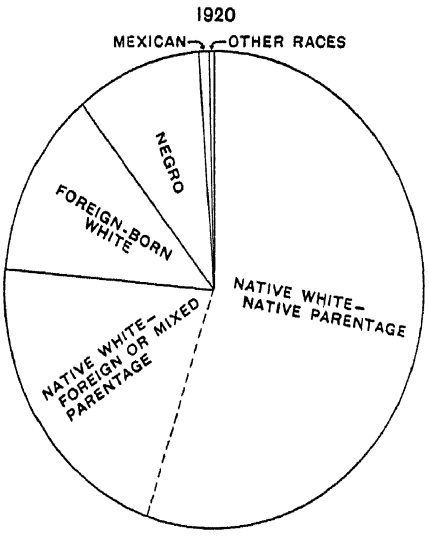


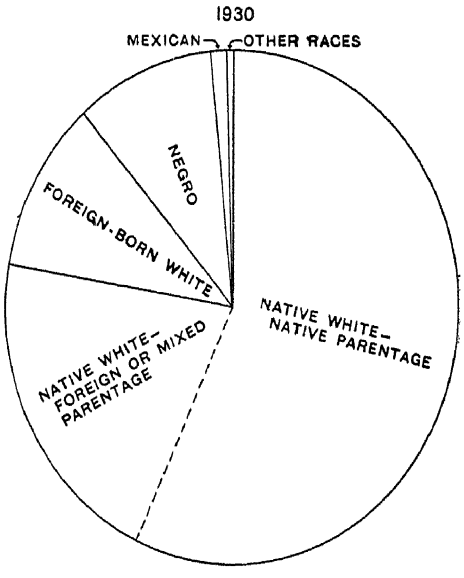


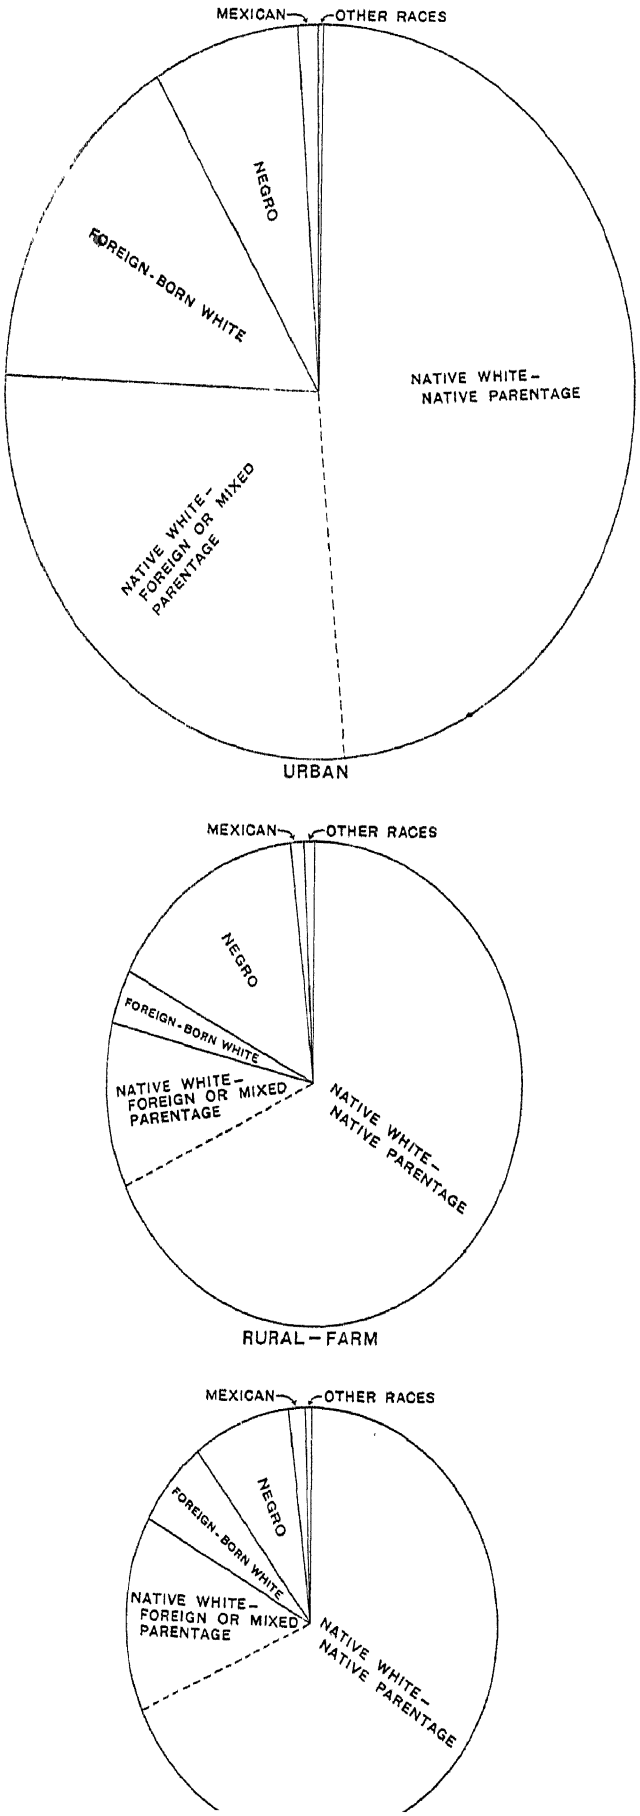
DISTRIBUTION OF THE TOTAL POPULATION BY COLOR AND NATIVITY: 1850 TO 1930

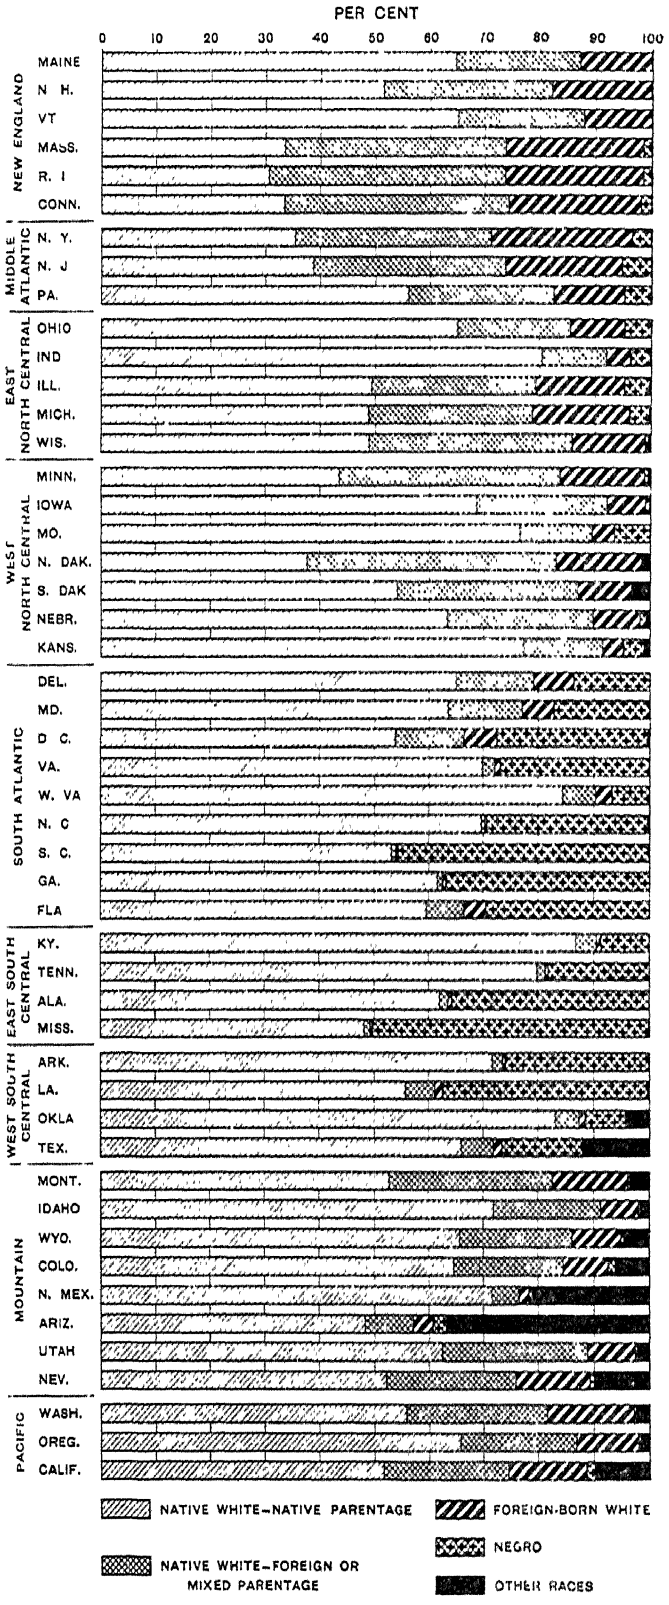


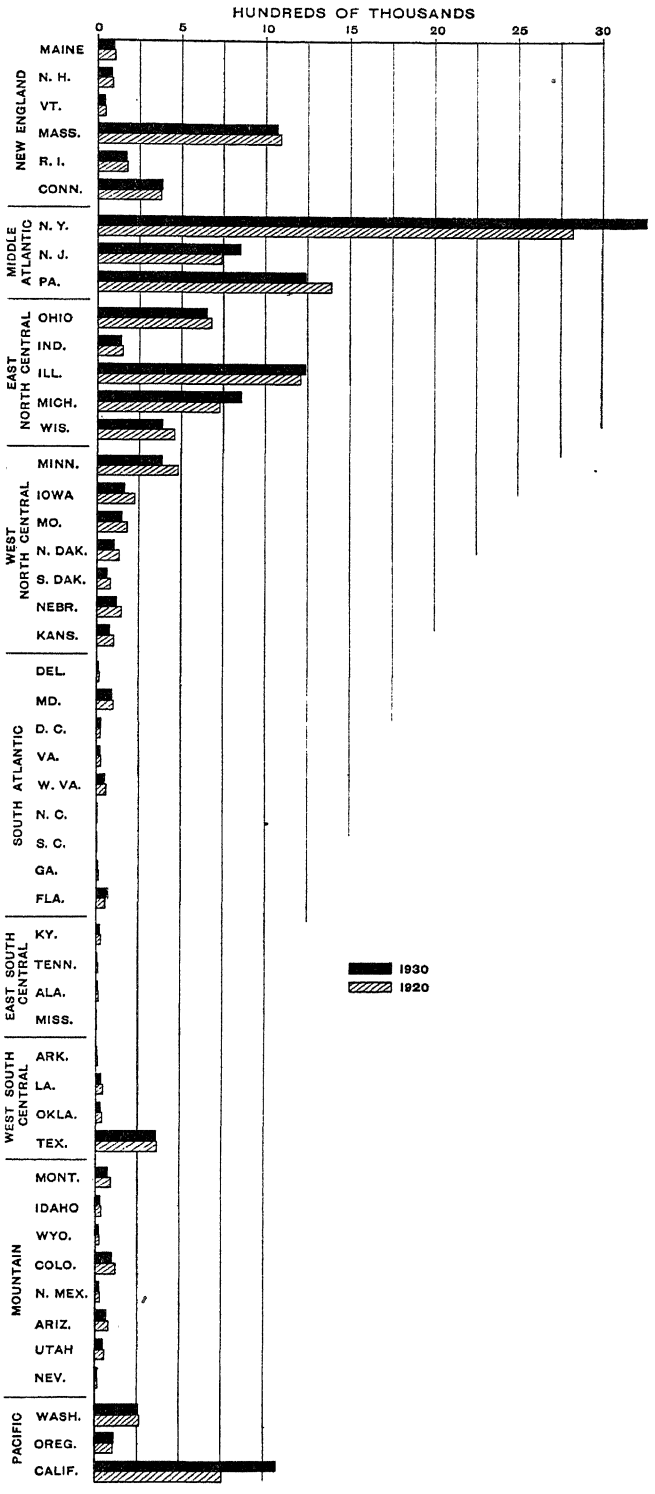




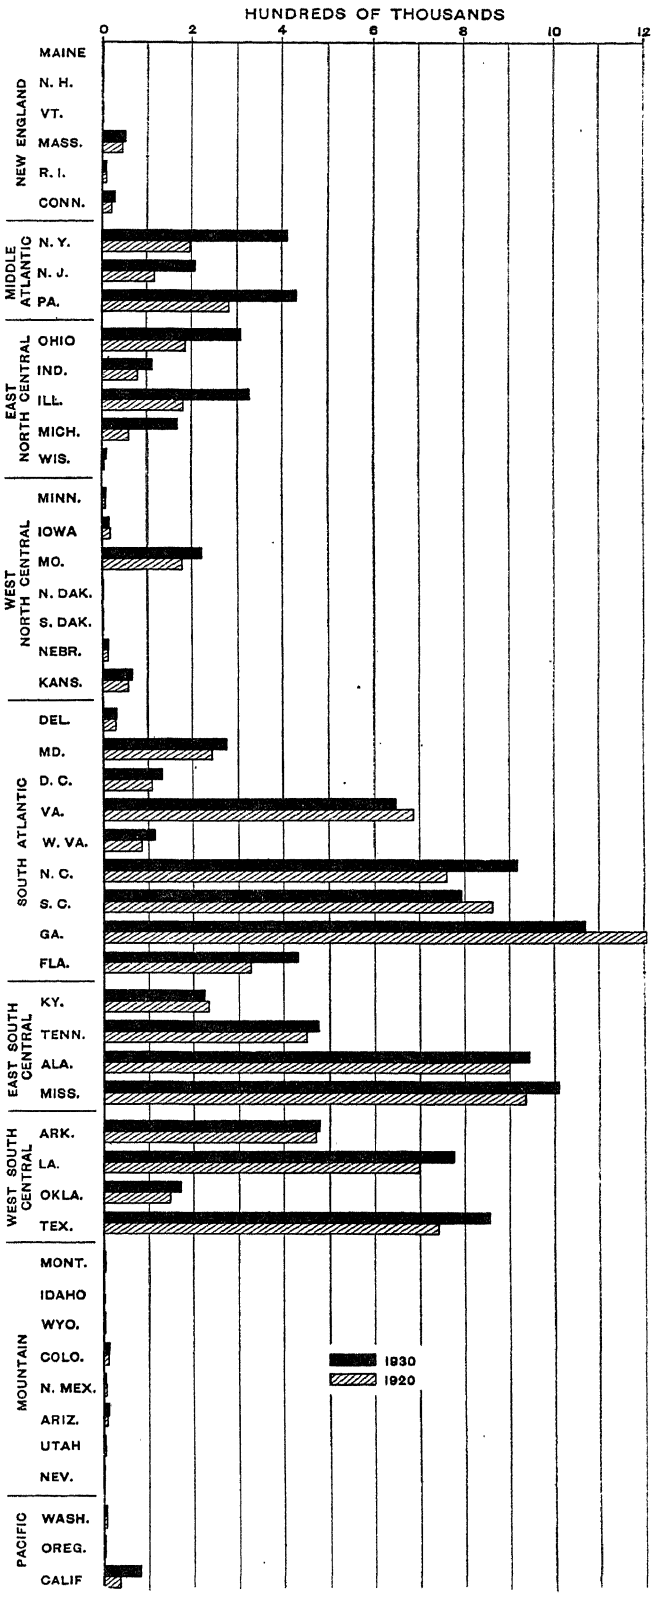








DISTRIBUTION OF THE URBAN, RURAL-FARM, AND RURAL-NONFARM POPULATION BY COLOR AND NATIVITY: 1930



COLOR, NATIVITY, AND PARENTAGE, BY STATES: 1930

FOREIGN-BORN POPULATION, BY STATES: 1930 AND 1920

NEGRO POPULATION, BY STATES: 1930 AND 1920

Adjusted figures for white population.—The change in the classification of Mexicans introduces many complications into the process of comparing the 1930 figures for the white population and its various subdivisions with the corresponding figures for 1920 and 1910. In order to provide a basis for more satisfactory comparisons, the estimated numbers of Mexicans included in the white classification in 1920 and 1910 have been subtracted from the figures as published for these years and the difference is presented in various tables as an "adjusted" figure for the 1920 and 1910 white population. Data are not available on which to base adjustments for census years prior to 1910, but the number of Mexicans in the United States in 1900 was relatively small. In some of the tables the adjusted figures are presented in the body of the table; in connection with other tables the effect of the adjustment is indicated in a footnote. The adjusted figures for both 1920 and 1910 for all of the classes of the white population are shown in a footnote to Table 6.

TABLE 4.—TOTAL POPULATION BY COLOR OR RACE, FOR THE UNITED STATES: 1790 TO 1930

[Figures are given under each class for all census years for which data are available. Per cent not shown where less than 0.1]

CENSUS YEAR	POPULATION									PER CENT OF TOTAL POPULATION

[1] Comprises 3,130 Hindus, 1,860 Koreans, 660 Hawaiians, 96 Malays, 18 Siamese, and 6 Samoans.
[2] The white population as classified in 1920 and 1910 included 700,541 and 367,510 persons, respectively (estimated), who would have been classified as Mexican in 1930. If the figures are adjusted by deducting these estimates, the number of white persons in 1920 becomes 94,120,374, or 89.0 per cent of the total, and in 1910, 81,364,447, or 88.5 per cent of the total.
[3] Comprises 2,507 Hindus, 1,224 Koreans, 110 Hawaiians, 19 Malays, 17 Siamese, 6 Samoans, and 2 Maoris.
[4] Comprises 2,545 Hindus, 462 Koreans, and 8 Maoris.
[5] Exclusive of Indians in Indian Territory and on Indian reservations, not enumerated at censuses prior to 1890.
[6] Estimated corrected figures. See explanation in text.

TABLE 13.—PER CENT DISTRIBUTION OF POPULATION BY COLOR, NATIVITY, AND PARENTAGE, BY DIVISIONS AND STATES: 1900 TO 1930

[Percentages for native whites of foreign or mixed parentage, and for foreign-born whites, are based on figures adjusted for Mexicans, as presented for 1920 and 1910 in Table 18. "Other races" for 1920 and 1910 include estimated number of Mexicans. Per cent not shown where less than 0.1]

TABLE 18.—POPULATION BY COLOR, NATIVITY, AND PARENTAGE, BY DIVISIONS AND STATES: 1890 TO 1930

[Figures for 1920 and 1910 adjusted by deducting the estimated number of Mexicans from the white population and adding them to "Other races." A minus sign (—) denotes decrease. Per cent not shown where less than 0.1]

TABLE 23.—NATIVE AND FOREIGN-BORN POPULATION BY COLOR OR RACE, FOR CITIES OF 100,000 OR MORE: 1930, 1920, AND 1910

[Figures for the white population in 1920 adjusted by deducting the estimated numbers of Mexicans which are shown separately in italics. No adjustment made for 1920 if the number of Mexicans in the city in 1930 was below 100, and no adjustment made for any city in 1910. Per cent not shown where less than 0.1 or where base is less than 100]

[1] Distribution of nonwhite classes by nativity not available for 1910.

TABLE 24.—POPULATION BY COLOR, NATIVITY, AND PARENTAGE, FOR CITIES OF 100,000 OR MORE: 1930 AND 1920

[Figures for 1920 have been adjusted by deducting the estimated number of Mexicans from the white classes and adding them to "Other races." No adjustment made if the number of Mexicans in the city in 1930 was below 100. A minus sign (−) denotes decrease. Per cent not shown where less than 0.1 or where base is less than 100]

CHAPTER 3.—SEX DISTRIBUTION

INTRODUCTION

The distribution by sex of the white population of the United States has been ascertained at every Federal census, but data on this subject for the total population were collected for the first time in 1820.

The distribution of the population by sex is a fundamental classification, essential to the proper interpretation of almost every other phase of population statistics. The sex distinction is therefore extensively presented in correlation with other classifications. This chapter is devoted mainly to a consideration of the relative numerical importance of the two sexes in different sections of the country and in the principal color, nativity, and parentage classes of the population.

The question as to sex is the simplest inquiry on the population schedule. There is no ambiguity of terms, and but rarely any motive for misrepresenting the facts to the enumerator. The sex classification of the population as a whole may therefore be accepted as the most dependable of all the classifications. Imperfect returns as to color, nativity, or parentage are more likely to occur, however, in the case of males than in the case of females, since males predominate among the foreign born and among the floating population, for both of which classes accurate information is sometimes difficult to obtain. A certain number of foreign-born persons, for example, are likely to be returned as native; and of these, far more will be males than females. From such sources may arise slight errors in the sex distribution of the several classes of the white population, but these will not be large enough to affect appreciably the sex ratio—that is, the number of males per 100 females.

Total population.—The statistics relating to the sex distribution of the population of continental United States, as returned at the Fifteenth Decennial Census, are summarized in Table 1, and comparative figures are presented for prior censuses. Statistics relating to sex distribution for the population of all the outlying possessions except the Philippine Islands are given in the special report entitled "Outlying Territories and Possessions."

The following statement shows the excess of males in the total population for each census year beginning with 1820.

CENSUS YEAR	Excess of males	CENSUS YEAR	Excess of males	CENSUS YEAR	Excess of males
1930	1,499,114	1890	1,526,488	1850	483,444
1920	2,090,242	1880	881,857	1840	307,611
1910	2,692,288	1870	428,759	1830	198,958
1900	1,638,321	1860	727,087	1820	154,757

This preponderance of males is due in part to the fact that the total population includes a considerable proportion of foreign-born persons, among whom the males greatly outnumber the females; but in the most important class of the native population, namely, the native whites of native parentage, there is also a marked excess of males.

White population.—The preponderance of males over females in the white population is due in part to the abnormal sex distribution of the foreign-born whites, but among the native whites also the males outnumbered the females in 1930 by 522,490. This excess, however, occurs only among the native whites of native parentage, the foreign-parentage and mixed-parentage groups both showing an excess of females in 1930. (See Table 1.)

The preponderance of males among the native whites of native parentage has appeared at each census beginning with that for 1890, at which the distinction between native and foreign parentage was first made by sex. For all native whites combined an excess of males has also been shown at each census beginning with 1850, when the classification according to nativity was first made.

The sex ratio for the total native white population has shown a decline at each census since 1890. This reduction has been particularly rapid since 1910. Between 1910 and 1920, emigration, war losses, and increase in military and naval services stationed abroad at the time the 1920 census was taken and therefore not included in the population of continental United States, all contributed to a relative decrease in the male population. In general, however, the reduction in the sex ratio is mainly due to the rapid fall in the birth and death rates and the consequent aging of the population. In every population, there is a preponderance of male births, but the death rate of males, both in early and in late age periods, is higher than that of females. Consequently, a decreased proportion of children in the population relative to that of adults will result in a decline in the sex ratio.

The sex ratios for the native whites of native parentage, of foreign parentage, and of mixed parentage have all declined about equally since 1910.

The ratio for the foreign-born white population has declined sharply since 1910. In that year, following a decade of heavy immigration, the sex ratio of the foreign-born whites was 129.2. In 1920 it had fallen to 121.7, and in 1930 to 115.1, the lowest ratio since 1860. Under free immigration there was always a

large surplus of males over females in the foreign-born population, but with the outbreak of the World War many thousands of males returned to their native countries for military service. Since the World War, under selective immigration, the surplus of males has been more than balanced by the still larger surplus of males among emigrant aliens, so that in the net accession to the population from abroad there has been an actual excess of females. With restricted immigration the foreign born are rapidly aging. The median age of the foreign-born white population increased from 40 years in 1920 to 44 years in 1930. Since there are still many more males than females surviving in the older generation of immigrants, and since the death rate of males in the older age groups exceeds that of females, the excess of males is being rapidly reduced. With the continuance of present conditions, the sex ratio of the foreign-born white population will decline rapidly until there is an actual excess of females over males.

Negro population.—Differing from all other races, the Negroes have shown an excess of females over males at every census since and including that of 1840, although the returns for 1820 and 1830 showed a preponderance of males. The relative excess of females in 1930 was greater than that shown at any previous census except that of 1870.

Indian population.—At every census except that of 1870 the Indian population has shown an excess of males. No attempt was made, however, to secure a complete enumeration of this race prior to 1890, and it is doubtful whether the figures for earlier census years are of any material value as showing the true sex ratio of the total Indian population. The more recent returns also are subject to a somewhat greater margin of error than are those for the other races, by reason of the effort to count as Indian all persons having any trace of Indian blood. It is likely that some persons in whom the admixture of Indian blood was so slight as not to be readily noticeable were reported as white, and there may have been differences between the two sexes in regard to the frequency of this occurrence.

Mexican population.—Persons of Mexican birth or parentage who were not definitely returned as white or Indian were designated "Mexican" in 1930, and included in the general class of "Other races." In prior censuses most Mexicans have been classified as white. The fact that these persons were included with the white population in 1920, but were given a separate classification in 1930, affects slightly the comparison of the 1930 and 1920 data by sex as they are presented in this chapter. In the States near the Mexican border the sex ratio of the Mexicans does not differ radically from that of the total white population, but in more distant States, where the Mexican population is made up largely of workers without families, the sex ratio of the Mexican element is more like that of the foreign-born white.

Using as a basis the 1920 returns for persons born in Mexico, and persons having one or both parents born in Mexico, it has been estimated that there were in the United States in that year 700,541 persons who would have been classified as Mexican under the 1930 instructions. These may be compared with 1,422,533 persons returned as Mexican in 1930. Similarly it has been estimated that the white classification in 1910 included 367,510 persons who would have been counted as Mexican in 1930. The estimates of the number of Mexicans in 1920 are presented in Table 1, together with adjusted figures for the white population obtained by deducting the estimated numbers of Mexicans. In the detailed tables giving statistics for States and cities, however, the presentation is limited to the Mexicans returned in 1930 and the white population as reported, without adjustment for Mexicans.[1] The effects of this change in classification on the comparability of the sex ratios is of course limited to those areas in which an appreciable number of Mexicans are shown for 1930.

Chinese, Japanese, and "All other" population.—Among the Chinese, Japanese, and other minor elements of the population, the excess of males is very great, although there has been a pronounced decrease in the sex ratio from census to census since 1890 in the case of the Chinese, and since 1900 in the case of the Japanese. The excess of males among the immigrants of these races has been much greater than that in any other immigrant group. From the passage of the Chinese exclusion law, until 1920, the number of Chinese males in the United States steadily declined, chiefly because of deaths among the older Chinese immigrants. The number of females, however, has shown a steady increase since 1890, and the sex ratio has declined rapidly. The census of 1930 shows an increase in the total Chinese population nearly equal in numbers as between the sexes, but proportionally much greater for females than for males. The Japanese population has shown an increase at each census since 1870, when it was first separately enumerated, but the increase among Japanese males since 1910 has been comparatively slow, while the increase in the number of females has been rapid. The sex ratio in 1930 had declined to 143.3. In the absence of further immigration, the natural increase in the Japanese population, together with the larger number of deaths among males than among females, will bring the proportion of the sexes nearer to equality.

[1] The estimated numbers of Mexicans in 1920 are shown in some detail in chs. 6, 7, and 8 of this volume, with sex as incidental features, having been worked out after the material in the present chapter was in type.

Urban and rural population.—Since there are marked differences in the sex distribution of the population of urban and rural areas, statistics are presented for the urban and rural population, by sex, in Table 5.

Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, conditions are exceptional in that the compactly built portions of towns (townships) are not separately incorporated or politically distinct in any way from the rural territory within the same town; nor is it the usual practice to incorporate even the larger places as cities until they attain a population in excess of 10,000. Consequently, if only cities were counted as urban the classification would be quite inadequate. In 1920 and 1910 all towns in these States which had a population of 2,500 or more were classified as urban. This resulted in the inclusion of a considerable number of places that were mainly rural in their general characteristics. In 1930 the special rule for these States has been modified so as to place in the urban classification, in addition to the regularly incorporated cities, only those towns in which there is a village or thickly settled area having more than 2,500 inhabitants, and comprising, either by itself or when combined with other villages in the same town, more than 50 per cent of the total population of the town.

One other modification has been made in the definition of urban population for use in connection with the 1930 census. This modification extends the definition so as to include townships and other political subdivisions (not incorporated as municipalities, nor containing any area so incorporated) which had a total population of 10,000 or more, and a population density of 1,000 or more per square mile.

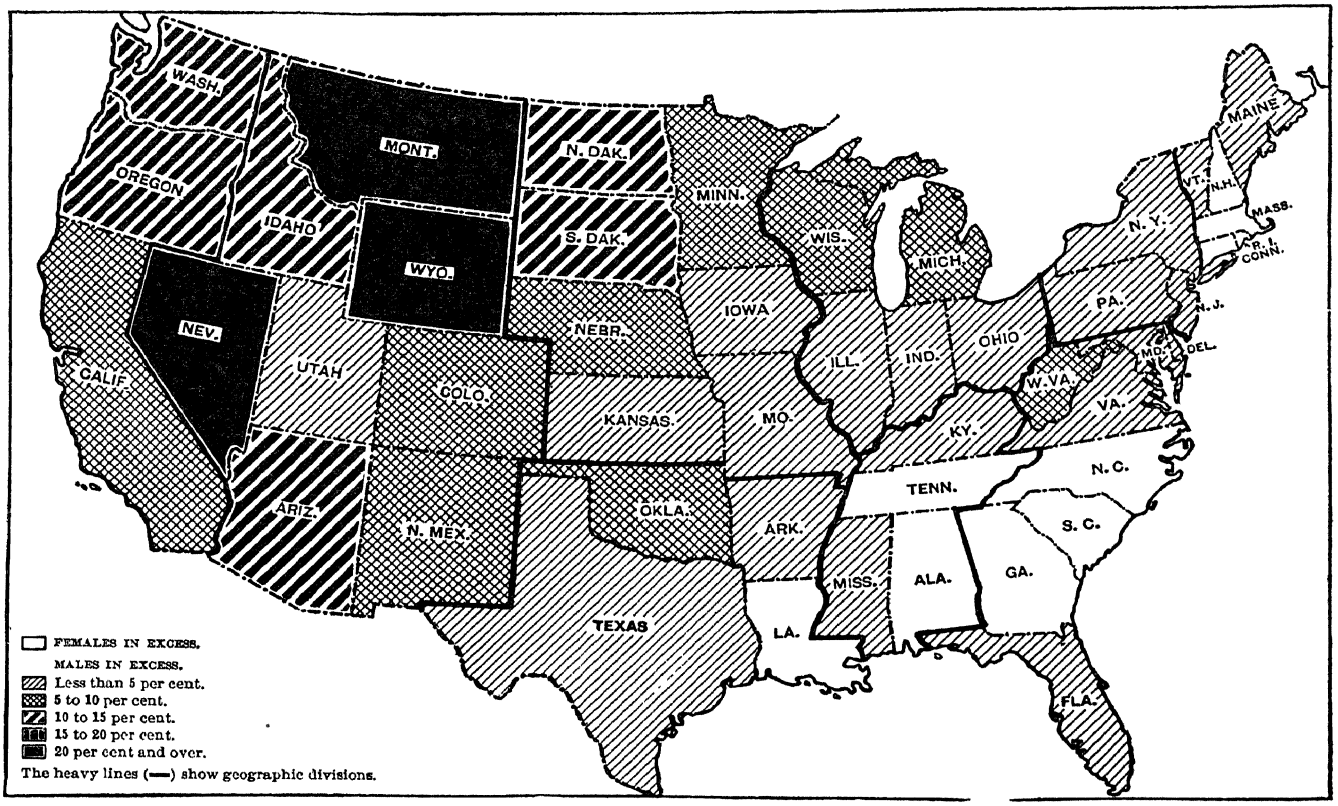
Since it has been found impracticable to go back and readjust to the new basis the 1920 urban and rural figures as they are tabulated by color, sex, age, etc., they are presented in all tables as established in 1920. The comparative figures, therefore, show differences in a few cases which must be considered or interpreted as solely or mainly the result of the change in the method of classification.

The ratio of males to females is decidedly higher in rural than in urban communities, not only for the total population but for each of its elements except the numerically unimportant group designated "Other races." (See Table 7.)

This difference between urban and rural communities in regard to the sex distribution of the principal classes of the population—which exists despite the fact that the foreign born, among whom the males considerably outnumber the females, are more numerous in urban than in rural communities—is doubtless due primarily to the fact that the cities afford many more opportunities for the gainful employment of women than do the rural districts.

Rural-farm and rural-nonfarm population.—In addition to the classification of the population as urban and rural, which is based on the size (number of inhabitants) and the political status (municipal incorporation) of the geographic unit in which the persons live, the population, both urban and rural, is further classified as farm and nonfarm, on the basis of a question reading "Does this family live on a farm?"

For the farm population living in urban territory, which forms less than 1 per cent of the total farm population, no detailed tabulations were made; hence the presentation of classified data for the farm population is limited to that part living in rural territory and designated as rural-farm population. This is done partly to simplify the classification (dividing the total population into three groups, namely, urban, rural-farm, and rural-nonfarm) and partly because it is felt that in general the farm families living within the corporate limits of cities or other incorporated places are living under conditions at least somewhat urban, rather than under typical farm conditions.



The rural-nonfarm or "village" population is made up largely of persons living in small towns or villages, both incorporated and unincorporated, though in many areas there are considerable numbers of families living in the open country but not on farms.

In the matter of sex distribution, as between the two subdivisions of the rural population, the rural-farm usually shows a much higher proportion of males than the rural-nonfarm, mainly because there is more opportunity for employment on farms for men than for women.

Geographic areas.—Statistics are presented in this bulletin for continental United States as a whole; for nine groups of States designated geographic divisions; for the three main sections of the country (the North, the South, and the West), for all cities having a population of 25,000 or more in 1930; for urban and rural areas, and for the two subdivisions of the latter, designated rural-farm and rural-nonfarm. The North includes the New England, Middle Atlantic, East North Central, and West North Central divisions; the South includes the South Atlantic, East South Central, and the West South Central divisions; and the West includes the Mountain and Pacific divisions.

RATIO OF MALES TO FEMALES IN TOTAL POPULATION, BY STATES: 1930

[District of Columbia, females in excess, not shown separately on the map]

RATIO OF MALES TO FEMALES IN TOTAL POPULATION, BY STATES: 1920

[District of Columbia, females in excess, not shown separately on the map]

TABLE 6.—POPULATION BY SEX, COLOR, AND NATIVITY, 1930, WITH NUMBER OF MALES PER 100 FEMALES, 1900 TO 1930, BY DIVISIONS AND STATES

[Mexicans were not returned as a separate class prior to 1930, but were counted with the white population; hence there are no comparative figures for the earlier censuses. See more detailed explanation in text. This situation frequently explains the lack of comparative figures for the group designated "Other races," which in 1930 included the Mexicans. Sex ratio not shown where number of females is less than 100]

TABLE 9.—POPULATION BY SEX, COLOR, AND NATIVITY, 1930, WITH NUMBER OF MALES PER 100 FEMALES, 1900 TO 1930, FOR CITIES OF 25,000 OR MORE

[Mexicans were not returned as a separate class prior to 1930, but were counted with the white population; hence there are no comparative figures for the earlier censuses. See more detailed explanation in text. This situation frequently explains the lack of comparative figures for the group designated "Other races," which in 1930 includes the Mexicans. Sex ratio not shown where number of females is less than 100]

CHAPTER 4

STATE OF BIRTH OF THE NATIVE POPULATION

CONTENTS

Page

Introduction 135
Migration east and west of the Mississippi River, and between the North and the South 136
Gain or loss through interdivisional or interstate migration 136
Urban and rural population 136
Rural-farm and rural-nonfarm population 136

MAPS AND DIAGRAMS

Per cent which population born in each State and living in other States formed of total born in each State: 1930 137
Per cent which population born in other States formed of total native population living in each State: 1930 137
Distribution of total population of each State as born in State of residence, in other States, or in foreign countries: 1930 138
Distribution of population born in each State as living in State of birth or in other States: 1930 138

TABLES

UNITED STATES

1. Number and per cent native and foreign born in the total population, with classification of native according to whether born in State of residence or elsewhere, for the United States: 1850 to 1930 139
2. Native population born east and living west of the Mississippi River, or vice versa: 1870 to 1930 139
3. Native population born in the North and living in the South, or vice versa: 1870 to 1930 139
4. Summary of data indicating results of migration of the native population east and west, and north and south, by color and nativity: 1930 and 1920 140

DIVISIONS AND STATES

5. Per cent distribution by division of birth, for the native population living in each division: 1930 and 1920 140
6. Per cent distribution by division of residence, for the population born in each division: 1930 and 1920 140
7. Native population by division of birth and division of residence, with net gain or loss through interdivisional migration: 1870 to 1930 141
8. Total population distributed as born in division of residence, in other divisions, or in foreign countries, by divisions, 1930, with percentages, 1900 to 1930 142
9. White and Negro population distributed as born in division of residence, in other divisions, or in foreign countries, by divisions: 1930 142
10. Native population, white and Negro, by division of birth and division of residence, 1930, with gain or loss through interdivisional migration, 1930, 1920, and 1910 142
11. Native white population of native parentage and of foreign or mixed parentage, by division of birth and division of residence, 1930, with gain or loss through interdivisional migration, 1930, 1920, and 1910 143
12. Native population, by sex, by division of birth and division of residence, with gain or loss through interdivisional migration: 1930 143
13. Per cent distribution by division of birth, for the native population living in each State: 1930 and 1920 144
14. Per cent distribution by division of residence, for the population born in each State: 1930 and 1920 145
15. Total population distributed as born in State of residence, in other States, or in foreign countries, by States, 1930, with percentages, 1900 to 1930 146
16. White and Negro population distributed as born in State of residence, in other States, or in foreign countries, by States: 1930 147
17. Native population, white and Negro, by State of birth and State of residence, 1930, with gain or loss through interstate migration, 1930, 1920, and 1910 148
18. Native white population of native parentage and of foreign or mixed parentage, by State of birth and State of residence, with gain or loss through interstate migration: 1930 150
19. Native population, by sex, by State of birth and State of residence, with gain or loss through interstate migration: 1930 151
20. Native population, by State of birth with residence in adjacent States, and by State of residence with birth in adjacent States: 1930 152
21. Native population of each division and State, by division and State of birth: 1930 153
22. Native white population of each division and State, by division and State of birth: 1930 158
23. Native Negro population of each division and State, by division and State of birth: 1930 163
24. Native white population of native parentage in each division and State, by division and State of birth: 1930 168
25. Native white population of foreign or mixed parentage in each division and State, by division and State of birth: 1930 172
26. Native male population in each division and State, by division and State of birth: 1930 176
27. Native female population in each division and State, by division and State of birth: 1930 180

URBAN AND RURAL

28. Number and per cent native and foreign born in the total urban, rural-farm, and rural-nonfarm population of the United States, with classification as to whether born in State of residence or elsewhere: 1930 184
29. Native urban, rural-farm, and rural-nonfarm population, by division of birth and division of residence, with gain or loss through interdivisional migration: 1930 184
30. Native urban and rural population, by State of birth and State of residence, with gain or loss through interstate migration: 1930 185
31. Native rural-farm and rural-nonfarm population, by State of birth and State of residence, with gain or loss through interstate migration: 1930 186
32. Native urban population in each division and State, by division and State of birth: 1930 187
33. Native rural-farm population in each division and State, by division and State of birth: 1930 191
34. Native rural-nonfarm population in each division and State, by division and State of birth: 1930 195

PRINCIPAL CITIES

35. Total population distributed as born in State of residence, in other States, or in foreign countries, for cities of 50,000 or more, 1930, with percentages, 1910 to 1930 199
36. Negro population distributed as born in State of residence, in other States, or in foreign countries, for cities of 50,000 or more having at least 5,000 Negroes, 1930, with percentages for 1930, 1920, and 1910 202
37. Native population by division and State of birth, for cities of 50,000 or more: 1930 204
38. Native Negro population by State of birth, for cities of 50,000 or more having at least 5,000 Negroes: 1930 216

CHAPTER 4.—STATE OF BIRTH OF THE NATIVE POPULATION

INTRODUCTION

The inquiry as to State of birth has been carried on the Population Schedule at each census beginning with that of 1850. In 1850 and 1860, however, State of birth was returned for the free population only. The statistics here presented relate to the population living in continental United States at the time of the census of 1930, with comparable statistics, so far as available, back to 1850. Corresponding statistics for Alaska, Hawaii, Puerto Rico, the Panama Canal Zone, and the Virgin Islands are presented in condensed form in a volume entitled "Outlying Territories and Possessions."

The returns as to State of birth are valuable mainly for the light they throw upon the movement of the native population from one place to another within the United States. "Native population," as the term is ordinarily used by the Bureau of the Census, comprises all persons born in continental United States or any of the outlying possessions, and persons of native parentage born abroad or at sea and designated, respectively, as "American citizens born abroad," and "American citizens born at sea." Thus the term "native population," when used in the headings of tables presenting statistics by States, does not indicate that the persons are native to (that is, born in) the several States, but merely that they are born in the United States. The natives of individual States are designated in the table headings as "Population born in" the specified States.

For a certain number of persons the enumerators returned the place of birth as "United States," without specifying the State. Persons for whom the place of birth was not returned at all, and for whom the returns give no indication of foreign origin, have also been assumed to be natives of the United States and included in the group designated "United States, State not reported."

In some of the tables the statistics have been limited to persons born in continental United States, with State of birth reported, excluding both those born in the outlying possessions and those for whom the State of birth was not reported.

The fact that each census from 1850 to 1930 has shown that more than one-fifth of the native Americans had migrated from the States of their birth and were living in other States indicates a rather high degree of mobility on the part of the population. In this connection it should be noted that the census figures take account only of those persons who have removed from one State to another and are, on the census date, living in States other than those in which they were born. The statistics therefore afford no indication of the amount of migration within a given State from rural to urban communities or from one locality to another. Much of the movement from country to city takes place within the boundaries of some one State, while some of the migration from one State to another is merely from one border county or city to another just across the State line. In fact, nearly one-half of the natives of the United States who were enumerated in 1930 outside the States in which they were born were found living in adjoining States.

Furthermore, the census figures do not give any indication of the movement of population from one State to another outside the State of birth. A person who at one or more times has removed from one State to another and has later returned to the State in which he was born is counted in the census tables as a person born in and living in that particular State, just as if he had remained there continuously; and if he has not returned to the State of his birth he is counted in the tables as born in one State and living in another, just as if he had gone directly from the State of birth to the State of present residence.

While the census figures for State of birth form practically the only source of extensive information with regard to interstate movements of population, extreme care should be exercised in the use of these figures as representing or measuring migration. Obviously, the census statistics do not indicate the whole number of persons who have migrated (removed) from the States in which they were born to other States, or to any other specific State, during any given period of time. Some of those who have gone from one State to another, from Vermont to Iowa, for example, have since died; others have returned to the States in which they were born; and still others have gone to other States, or to places outside the boundaries of continental United States. The census figure for the number of persons living in Iowa who were born in Vermont does not, therefore, represent the number of persons who have migrated from Vermont to Iowa, but that number minus those who have died or removed from the State. Again, if 50,000 Negroes had gone from Georgia to Illinois in 1922 and returned to Georgia in 1929, their double migration would have left no record in the census statistics. It is therefore with some hesitancy that the term "migration" is used at all in the headings of the tables presented herewith; for what the census figures show is not the extent of interstate

migration (that is, the number of persons who go from one State to another) but the net, cumulative results of such migration in combination with mortality.

Migration east and west of the Mississippi River, and between the North and the South.—Statistics indicating some of the results of the migration of the native population between the sections of the country lying east and west, respectively, of the Mississippi River are presented in Tables 2 and 4. The "Net gain of the West," which is shown in Table 4, is obtained by subtracting from the number of native persons reported as born east of the Mississippi River and living west of it (5,145,922) the number born west of the river and living east of it (1,648,832).

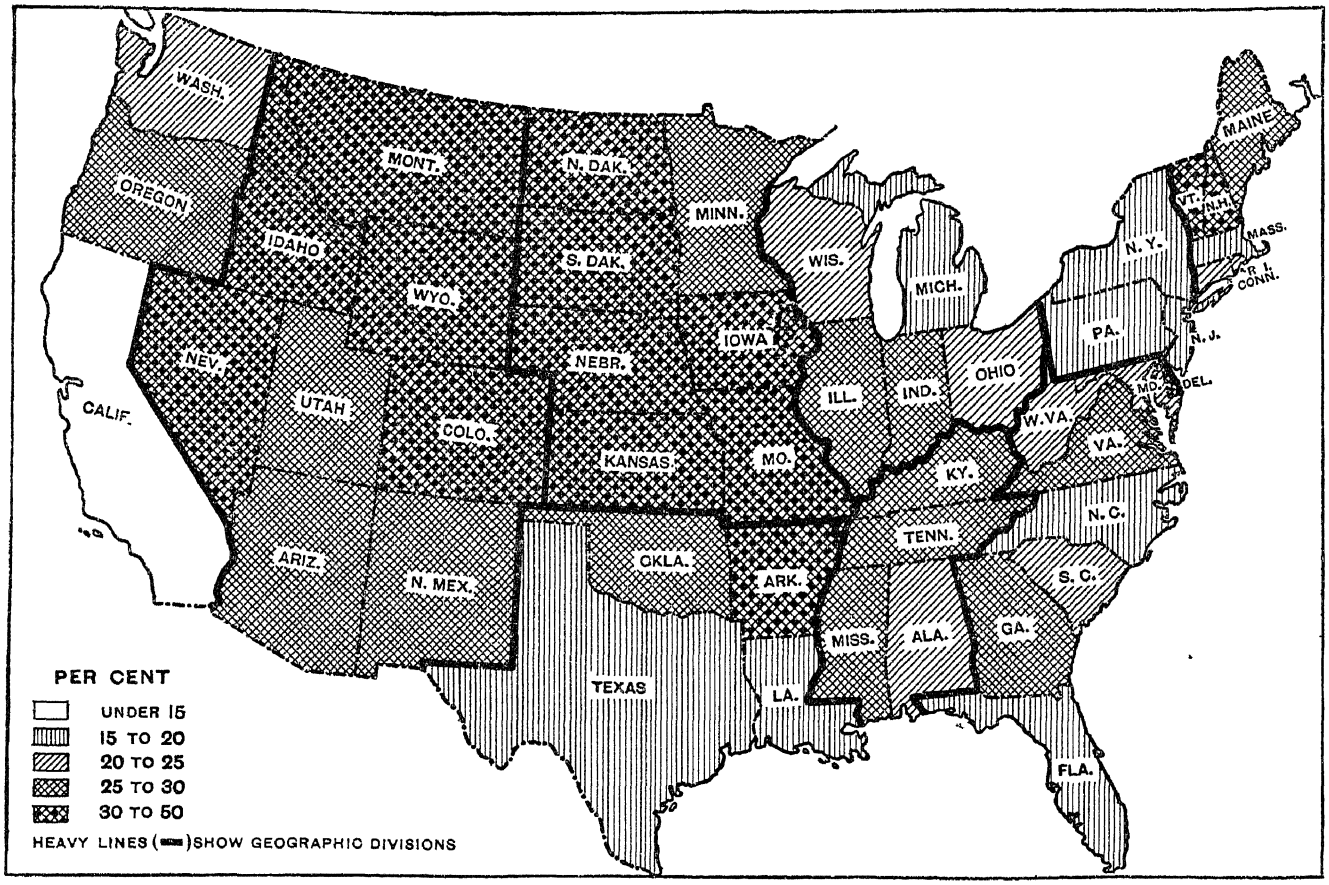
The results of the exchange of population between the North and South are likewise presented in Tables 3 and 4. There has been, of course, a considerable amount of migration from both the North and the South to the West; that is, to the States comprising the Mountain and Pacific divisions. It is believed, however, that the main currents of the movement of the population northward and southward are best indicated by the figures as presented in Tables 3 and 4.

Gain or loss through interdivisional or interstate migration.—The net gain or loss through interdivisional migration (Tables 7 to 12) and through interstate migration (Tables 17 to 19) represents the difference on the census date between the total number of surviving native migrants out of the specified division or State and the total number of surviving native migrants into the specified division or State. Some of these migrants are the survivors of groups who departed from, or arrived in, the division or State half a century or more before the census was taken. The figures do not, therefore, represent the migration in the sense of the number of persons coming or going during the preceding census decade or during any other specific period of time. The "change in net gain or loss as compared with preceding census," as shown in column I, Table 7, represents the algebraic difference between the net gains or the net losses at the beginning and the end of the decade. Even this figure, however, does not represent exactly the difference between the number of native migrants out of the division and the number of native migrants into the division, since it is affected also by differences in mortality and by the movement of native population between the division in question and foreign countries.

Urban and rural population.—Because of the differences between urban and rural population in respect to the proportions of persons born in other States, separate statistics are given in Tables 28 to 34 for the urban population, the rural-farm population, and the rural-nonfarm population. The extent of migration between one and another of these classes of population within the same State can not be shown, of course, as the census returns relate only to movements of population across State lines.

Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, conditions are exceptional in that the compactly built portions of towns (townships) are not separately incorporated or politically distinct in any way from the rural territory within the same town; nor is it the usual practice to incorporate even the larger places as cities until they attain a population in excess of 10,000. Consequently, if only cities were counted as urban the classification would be quite inadequate. In 1920 and 1910 all towns in these States which had a population of 2,500 or more were classified as urban. This resulted in the inclusion of a considerable number of places that were mainly rural in their general characteristics. In 1930 the special rule for these States has been modified so as to place in the urban classification, in addition to the regularly incorporated cities, only those towns in which there is a village or thickly settled area having more than 2,500 inhabitants, and comprising, either by itself or when combined with other villages in the same town, more than 50 per cent of the total population of the town.

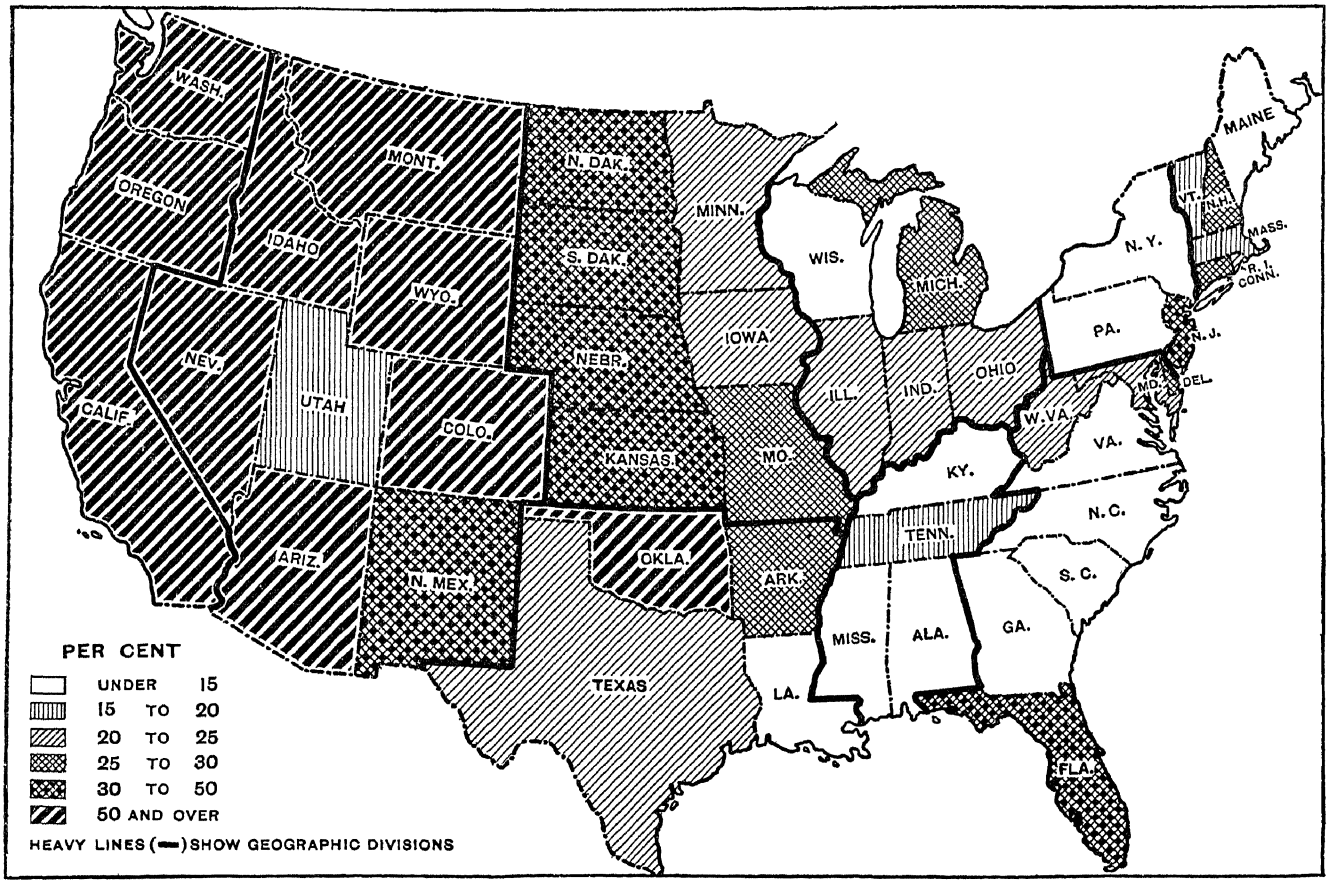
One other modification has been made in the definition of urban population for use in connection with the 1930 census. This modification extends the definition so as to include townships and other political subdivisions (not incorporated as municipalities, nor containing any area so incorporated) which had a total population of 10,000 or more, and a population density of 1,000 or more per square mile.



Rural-farm and rural-nonfarm population.—In addition to the classification of the population as urban and rural, which is based on the size (number of inhabitants) and the political status (municipal incorporation) of the geographic unit in which the persons live, the population, both urban and rural, is further classified as farm and nonfarm, on the basis of a question reading "Does this family live on a farm?"

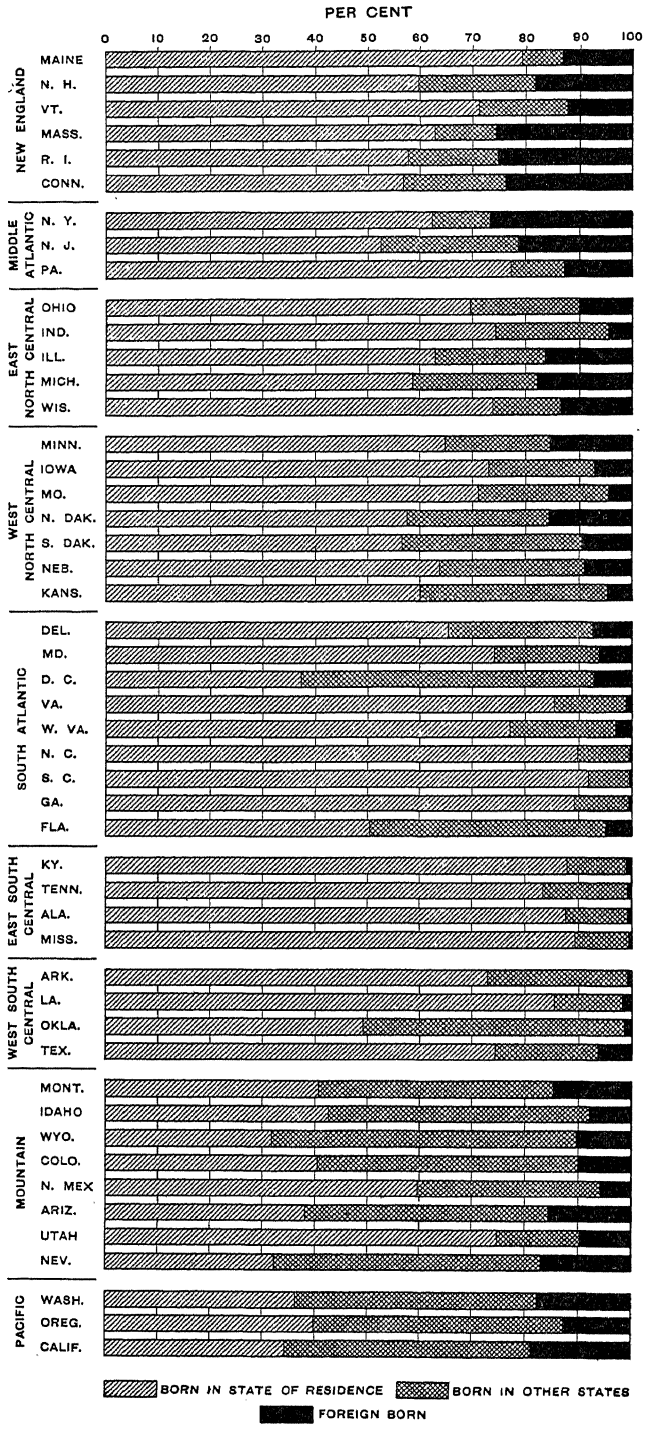
For the farm population living in urban territory, which forms less than 1 per cent of the total farm population, no detailed tabulations were made; hence the presentation of classified data for the farm population is limited to that part living in rural territory and designated as rural-farm population. This is done partly to simplify the classification (dividing the total population into three groups, namely, urban, rural-farm, and rural-nonfarm) and partly because it is felt that in general the farm families living within the corporate limits of cities or other incorporated places are living under conditions at least somewhat urban, rather than under typical farm conditions.

The rural-nonfarm or "village" population is made up largely of persons living in small towns or villages, both incorporated and unincorporated, though in many areas there are considerable numbers of families living in the open country but not on farms.



PER CENT WHICH POPULATION BORN IN EACH STATE AND LIVING IN OTHER STATES FORMED OF TOTAL BORN IN EACH STATE: 1930

[District of Columbia, 34 per cent, not shown separately on the map]



PER CENT WHICH POPULATION BORN IN OTHER STATES FORMED OF TOTAL NATIVE POPULATION LIVING IN EACH STATE: 1930

[District of Columbia, 60 per cent, not shown separately on the map]

DISTRIBUTION OF TOTAL POPULATION OF EACH STATE AS BORN IN STATE OF RESIDENCE, IN OTHER STATES, OR IN FOREIGN COUNTRIES: 1930

DISTRIBUTION OF POPULATION BORN IN EACH STATE AS LIVING IN STATE OF BIRTH OR IN OTHER STATES: 1930

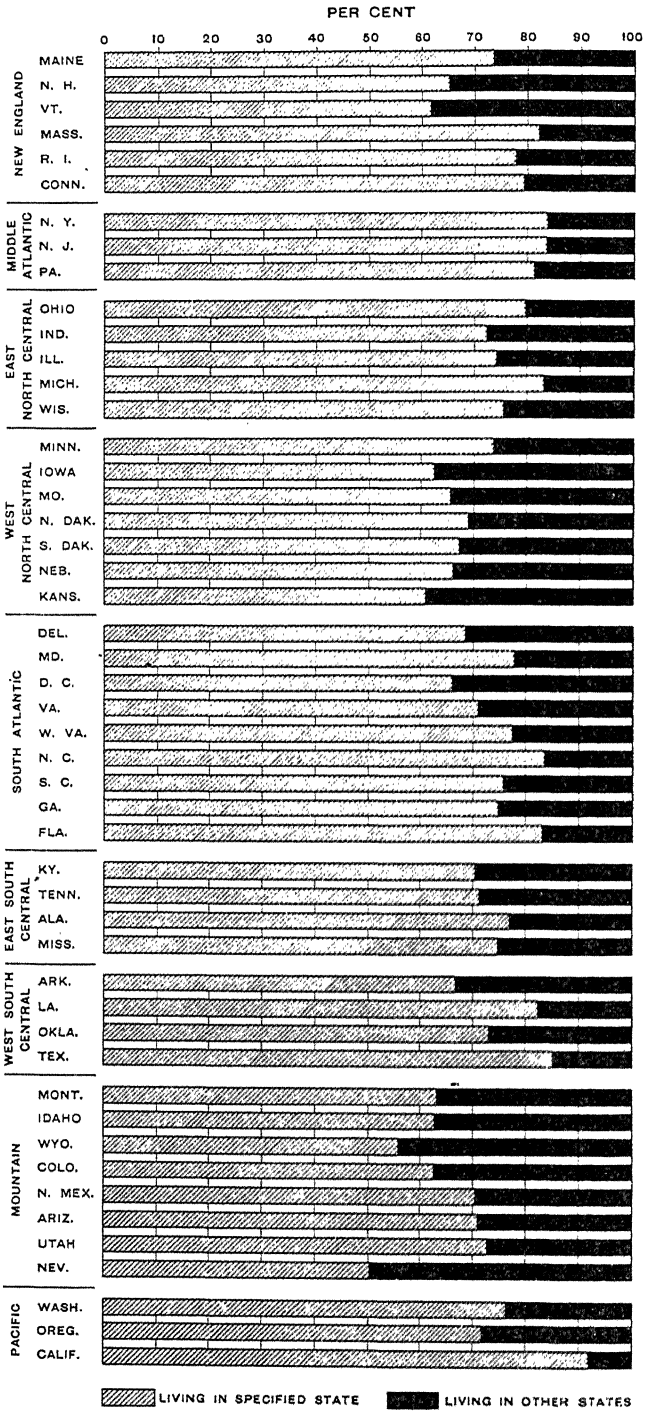


TABLE 1.—NUMBER AND PER CENT NATIVE AND FOREIGN BORN IN THE TOTAL POPULATION, WITH CLASSIFICATION OF NATIVE ACCORDING TO WHETHER BORN IN STATE OF RESIDENCE OR ELSEWHERE, FOR THE UNITED STATES: 1850 TO 1930

CENSUS YEAR	Total population	NATIVE POPULATION										FOREIGN-BORN POPULATION	
		Total		With State of birth reported

[1] Exclusive of population of Indian Territory and Indian reservations, specially enumerated in 1890, with a native population of 325,451 not distributed by State of birth and a foreign-born population of 13. These areas were not enumerated prior to 1890.
[2] White and free colored population only.

TABLE 2.—NATIVE POPULATION BORN EAST AND LIVING WEST OF THE MISSISSIPPI RIVER, OR VICE VERSA: 1870 TO 1930

[The small number of persons for whom State of birth was not reported are omitted from this table]

SECTION	1930	1920	1910	1900	1890	1880	1870
Total native population born in United States and with State of birth reported	**108,065,719**	**91,345,463**	**78,095,419**	**65,402,767**	**52,965,719**	**43,475,498**	**32,978,660**
Born east of the Mississippi River [1]	77,755,710	67,487,718	58,981,669	51,163,588	43,267,325	37,196,027	29,518,843
Living east of the Mississippi River	72,609,788	62,259,868	53,704,790	46,651,491	38,906,809	33,685,290	27,084,122
Living west of the Mississippi River	5,145,922	5,227,850	5,276,879	4,512,097	4,360,516	3,510,737	2,434,721
Per cent of total born east of the Mississippi	6.6	7.7	8.9	8.8	10.1	9.4	8.2
Born west of the Mississippi River [1]	30,310,009	23,857,745	19,113,750	14,239,179	9,698,394	6,279,471	3,459,817
Living west of the Mississippi River	28,661,177	22,818,840	18,428,977	13,720,636	9,416,035	6,069,112	3,324,048
Living east of the Mississippi River	1,648,832	1,038,905	684,773	518,543	282,359	210,359	135,769
Per cent of total born west of the Mississippi	5.4	4.4	3.6	3.6	2.9	3.3	3.9
Net gain of West (excess of persons born east and living west of the Mississippi over persons born west and living east)	3,497,090	4,188,945	4,592,106	3,993,554	4,078,157	3,300,378	2,298,952

[1] In the preparation of this table the entire States of Minnesota and Louisiana have been treated as lying west of the Mississippi River.

TABLE 3.—NATIVE POPULATION BORN IN THE NORTH AND LIVING IN THE SOUTH, OR VICE VERSA: 1870 TO 1930

[Persons born and living in the West and the small number of persons for whom State of birth was not reported are omitted from this table]

SECTION	1930	1920	1910	1900	1890	1880	1870
Population born and living in the North or in the South and with State of birth reported	**97,746,825**	**83,852,590**	**72,581,780**	**62,098,675**	**50,706,023**	**42,183,329**	**32,291,720**
Born in the North [1]	59,468,321	51,341,156	43,975,391	37,941,559	31,016,121	25,480,443	19,655,131
Living in the North	57,590,129	49,619,807	42,526,162	36,920,109	30,380,527	25,006,653	19,356,833
Living in the South	1,878,192	1,721,349	1,449,229	1,021,450	635,594	473,790	298,298
Per cent of total born in the North	3.2	3.4	3.3	2.7	2.0	1.9	1.5
Born in the South [1]	38,278,504	32,511,434	28,606,389	24,157,116	19,689,902	16,702,886	12,636,589
Living in the South	34,981,175	30,359,885	27,079,282	22,861,263	18,554,282	15,590,078	11,585,836
Living in the North	3,297,329	2,151,549	1,527,107	1,295,853	1,135,620	1,112,808	1,050,753
Per cent of total born in the South	8.6	6.6	5.3	5.4	5.8	6.7	8.3
Net gain of the North (excess of persons born in the South and living in the North over persons born in the North and living in the South)	1,419,137	430,200	77,878	274,403	500,026	639,018	752,455

[1] The North: New England, Middle Atlantic, East North Central, and West North Central divisions. The South: South Atlantic, East South Central, and West South Central divisions.

TABLE 4.—SUMMARY OF DATA INDICATING RESULTS OF MIGRATION OF THE NATIVE POPULATION EAST AND WEST, AND NORTH AND SOUTH, BY COLOR AND NATIVITY: 1930 AND 1920

[The small number of persons for whom State of birth was not reported are omitted from this table]

SECTION [1]	TOTAL		WHITE						NEGRO		OTHER RACES

CHAPTER 5.—COUNTRY OF BIRTH OF THE FOREIGN BORN

INTRODUCTION

The inquiry as to country of birth of the foreign born has been made at each census beginning with 1850. The statistics here presented relate to the population of continental United States, the States, and those cities having 100,000 inhabitants or more. Statistics for Alaska, Hawaii, Puerto Rico, the Virgin Islands, and Panama Canal Zone are given in the Report of the Fifteenth Census on Outlying Territories and Possessions. The Philippine Islands were not enumerated as a part of the Fifteenth Census.

The foreign-born population comprises all persons born outside of the United States or any of the outlying possessions, except certain persons whose parents at the time of their birth were American citizens. Persons born in any of the outlying territories or possessions, and American citizens born abroad or at sea, are regarded as native.

Color or race.—The statistics here given, except as specified in Table 2, relate to the total foreign-born population of all races combined. Of the 14,204,149 persons of foreign birth who were enumerated in continental United States in 1930, 13,366,407 were white, and 837,742 of nonwhite races, consisting mainly of Mexicans, Negroes, Chinese, and Japanese. (See Table 2.) As a general rule, to which natives of China, Japan, India, Mexico, and the West Indies constitute the leading exceptions, the total number reported as born in a given country or region does not differ greatly from the number of white persons reported as born in that country or region.

At the census of 1930, the population of Mexican origin and Indian or mixed white and Indian descent has for the first time been tabulated as a separate nonwhite race. In the foreign-born nonwhite population, the Mexicans constitute by far the largest single element. In the foreign-born population of 1920 it is estimated that there were 457,360 persons who would have been classified as Mexican under the 1930 instructions. With adjustment for Mexicans on the basis of this estimate, for purposes of comparison with the statistics of 1930, the foreign-born population of 1920 was composed of 13,255,394 persons of the white, and 665,298 of the nonwhite races.

Country of birth.—The statistics of country of birth for 1930 have been tabulated in accordance with present political boundaries. The statistics of 1920 were also tabulated on the basis of postwar boundaries, so that, aside from a few minor changes in classification, the country of birth figures for 1930 are comparable with those of 1920.

Table 1 shows the foreign-born population for the leading countries of birth for 1930 and 1920, with percentages of increase or decrease.

TABLE 1.—COUNTRY OF BIRTH OF THE FOREIGN-BORN POPULATION OF THE UNITED STATES: 1930 AND 1920

[A minus sign (−) denotes decrease.]

COUNTRY OF BIRTH	1930	1920	INCREASE

China	46,129	43,560	2,569	5.9
Japan	70,993	81,502	−10,509	−12.9
Canada—French	370,852	307,786	63,066	20.5
Canada—Other	915,537	817,139	98,398	12.0
West Indies	106,241	78,962	27,279	34.5
Mexico	641,462	486,418	155,044	31.9
All other countries	244,171	194,923	49,248	25.3

Census figures prior to 1920 are strictly comparable with those of 1920 and 1930 only for those countries the boundaries of which have remained unchanged. Over the entire period from 1850 to 1930 accurate comparisons are possible only for England, Scotland, Wales, Ireland (Northern Ireland and Irish Free State in 1930), Norway, Sweden, Netherlands, Switzerland, Spain, Portugal, Canada (total of Canada—French, Canada—Other, and Newfoundland), and Mexico.

For several other countries, as for example, Italy, France, and Belgium, the figures are slightly affected by boundary changes, but these changes have not been so

great as to destroy entirely the value of comparative figures. The boundaries of other countries, as for example, Russia, Austria, Hungary, Rumania, and Greece, have been so changed that comparisons between pre-war and postwar years are subject to a large margin of error.

In the tabulation of country of birth, the greatest difficulties were encountered in the classification of persons born in the former Austro-Hungarian Empire. Many persons born within the pre-war boundaries of this Empire could not or did not give to the enumerator the information needed for the determination of their country of birth on the basis of postwar geography. It is therefore quite possible that some persons were assigned to Austria who were really born within the present areas of either Czechoslovakia or Yugoslavia, and that persons were assigned to Hungary who were born within the present areas of Rumania or Yugoslavia. Similarly, it is possible that some persons born in Latvia, Estonia, or Lithuania were assigned to Russia.

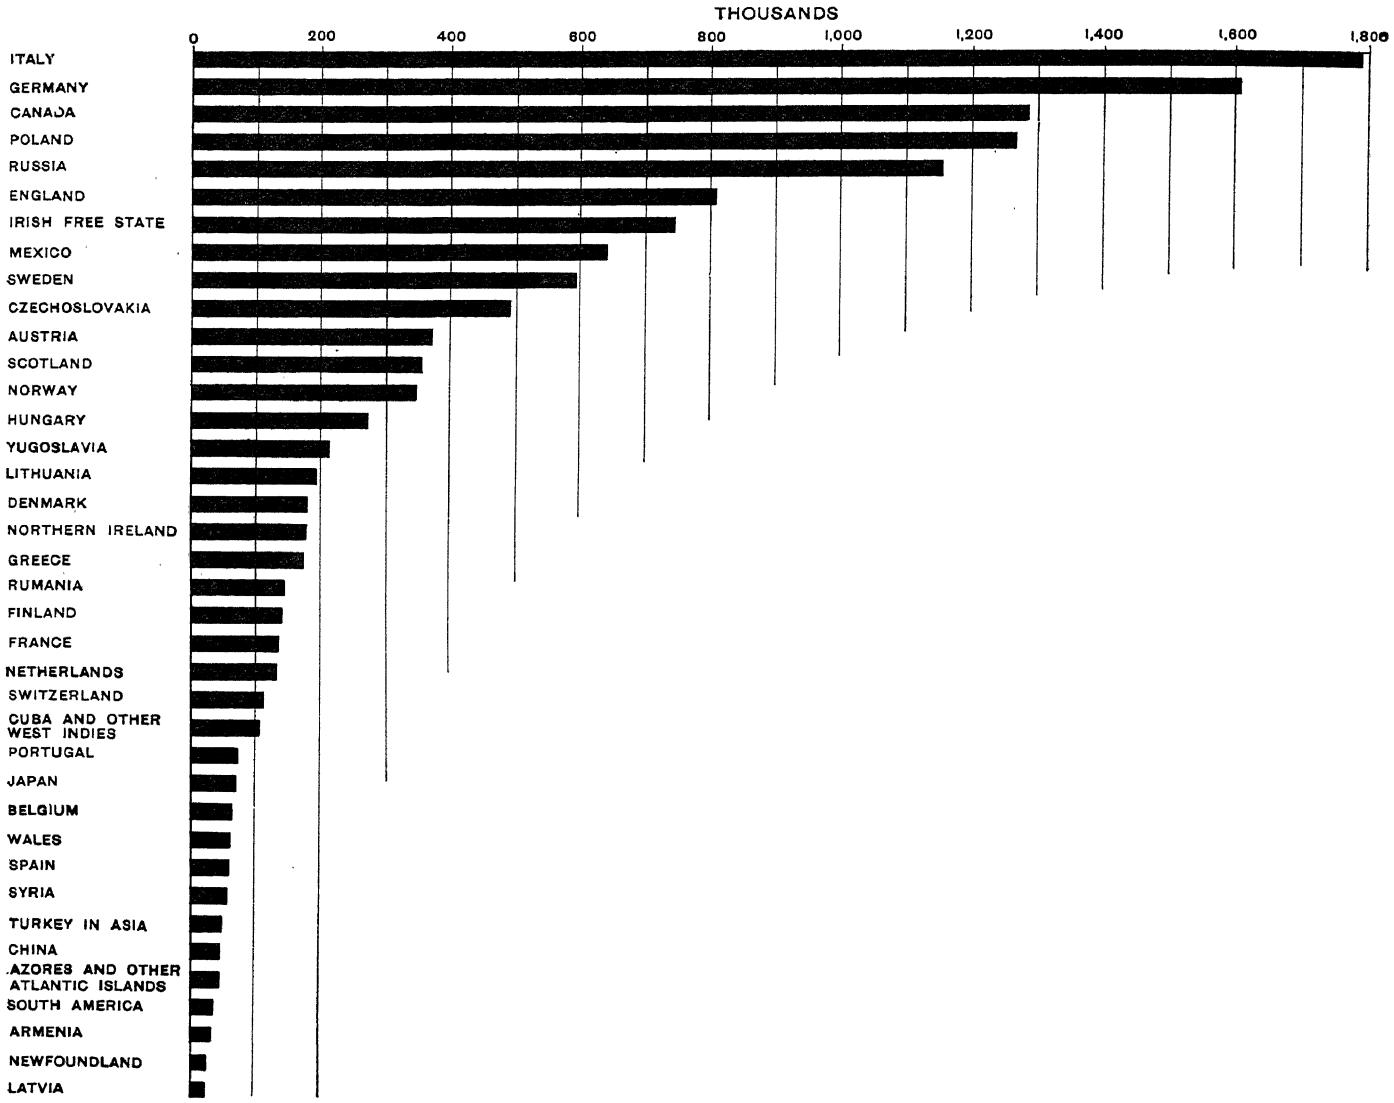
In the statistics of country of birth of the foreign born, the countries included in the tabulation have generally been restricted to those which had at the time of the census a separate political entity. From 1860 to 1900, however, an exception was made in the case of Poland. Although Poland was not restored to its original status as an independent country until the end of the World War, its historical position was such that Polish immigrants generally returned Poland as their country of birth regardless of the political sovereignty over their birthplace. From 1860 to 1890, persons returned as born in Poland were so tabulated without qualification. At the census of 1900 an attempt was made to distinguish Austrian, German, and Russian Poland, and separate statistics for each were presented. At the census of 1910, persons returned as born in Poland were assigned either to Russia, Germany, or Austria, but for purposes of comparison it may be assumed that the number of persons from these countries returned as of Polish mother tongue in 1910 is approximately equivalent to the number in the United States in 1910 who were born within the present boundaries of Poland. While in fact there were some Polish-speaking persons born in Austria, Germany, or Russia outside the present limits of Poland, there were also perhaps an equal number of non-Polish-speaking persons who were born within those limits. In Table 4, which shows the foreign-born population by country of birth from 1850 to 1930, the figures for 1910 for Poland have been adjusted by means of mother tongue, to conform as nearly as possible to the conditions of 1930.

Changes in the foreign-born population.—The composition of the foreign-born population of the United States has undergone a great change since 1850, and particularly since 1880, as will be seen by referring to the percentages in Table 4. Since the foreign-born population at any census is composed of the survivors of the foreign-born population of the preceding census, plus the survivors of the immigration in the 10 years preceding the census, the changes in the composition of the foreign-born population follow the changes in the character of immigration but take place less rapidly. In 1850 the great majority of the foreign born were immigrants of the previous 10 years, of whom more than 80 per cent came from Ireland, Germany, and England. Until about 1890, immigration was largely from these countries and from the Scandinavian countries and Canada. After 1890, until 1914, when immigration was checked by the World War, the greater part of the accessions to the foreign-born population were from eastern, central, and southern Europe. By reason of survival from the earlier immigration, persons of northern and western European stocks still formed a majority of the foreign-born population until the census of 1920.

Under the present system of quota immigration, future changes in the national character of the foreign-born population will be due primarily to the relative mortality of the national elements in the present population. Since quota immigration is not sufficient to replace the mortality in the foreign-born population as it is now constituted, the foreign-born population will decrease until it is limited to the survivors of immigrants allowed to enter under restrictive legislation. The rate of decrease will increase rapidly as the average age of the foreign born advances, as it must advance as the immigrants of the period of unrestricted immigration grow older. Even in the decade 1920 to 1930, the median age of the foreign-born white population advanced from 40 to 44 years. Since the heaviest immigration from Ireland, Germany, England, Norway, and Sweden took place several decades ago, the population born in those countries has already reached an age at which the age specific death rate is high. Those born in eastern, central, and southern Europe are still comparatively young. According to the probabilities of survival, the relative proportion of eastern, central, and southern Europeans in the foreign-born population will continue to increase for several decades in spite of the limitation on immigration from these countries in the present quota law.

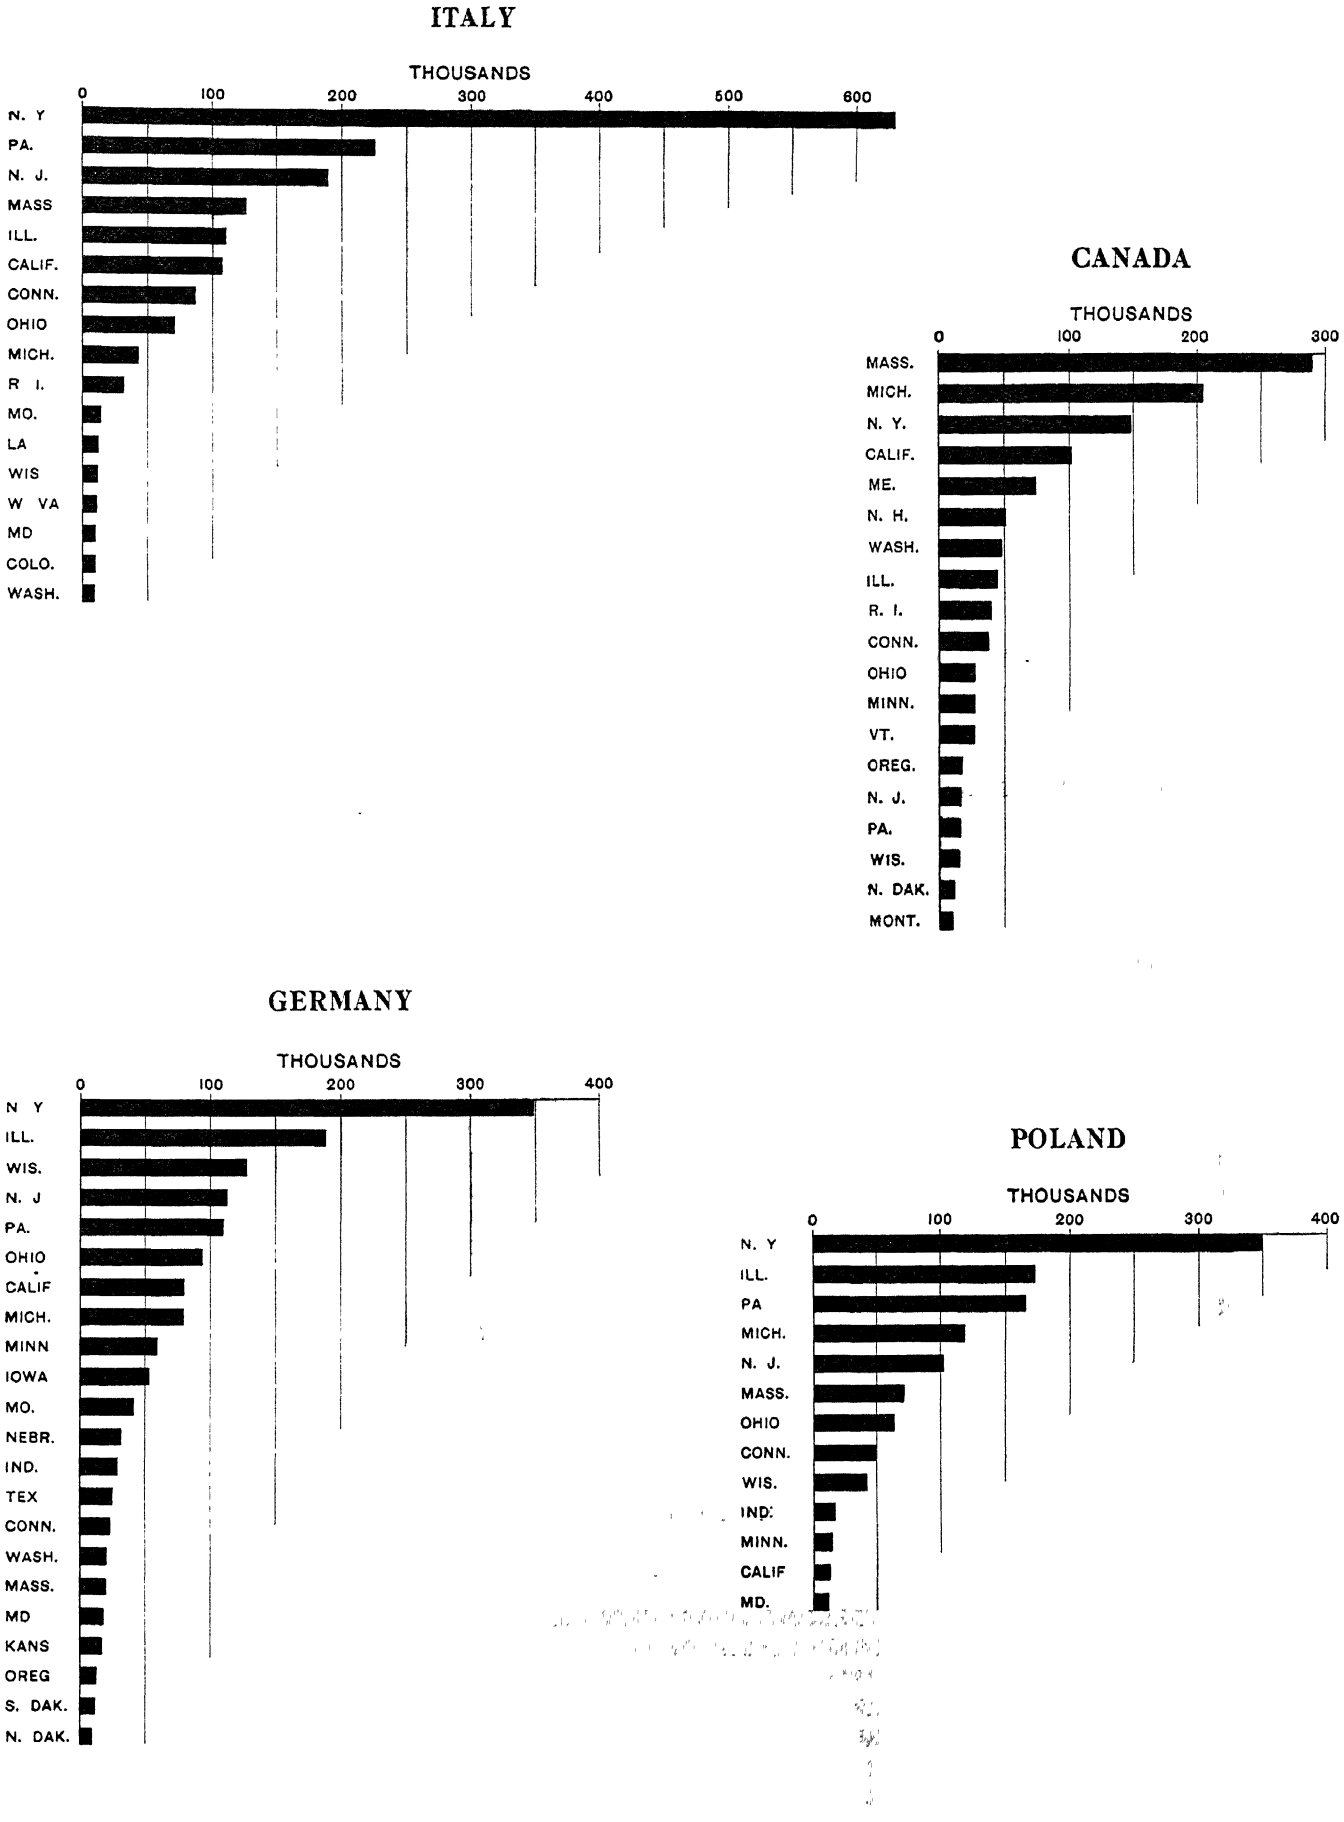
Sex distribution.—In the early immigration from Germany, particularly that between 1845 and 1885, and in the immigration from eastern, central, and southern Europe, and that from Asia between 1890 and 1914, there was a strong predominance of males. As a result, the ratio of males to females among the foreign born has always been high. When the volume of immigration declines, or when immigration is restricted, this predominance of males in the foreign-

born population tends to decline. This is due (1) to the repatriation of male immigrants; (2) to the admission of the wives and families of naturalized citizens, and (3) to the higher death rate of males, which results in the survival of relatively more of the female immigrants. Between 1920 and 1930 the sex ratio of the foreign-born population declined from 122.9 to 116.6, as shown in Table 3. In the population born in the Irish Free State, which is probably the oldest national group among the foreign born, there is a large excess of females. There is also a definite excess of females in the population born in Canada. The decline in the sex ratio toward an approximate equality in sex distribution was marked in nearly all of the important national groups of the foreign-born population between 1920 and 1930. This decline is particularly marked in the group born in China. As a result of the operation of the exclusion act, the male population born in China showed a decrease during the decade, but the number of females of Chinese birth more than doubled, probably because of marriages between Chinese men of American birth or Chinese merchants in the United States and women born in China.



Urban, rural-farm, and rural-nonfarm population.—Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, towns (townships) are classified as urban if they have a population of 2,500 or more and certain urban characteristics; and a few large and densely populated townships in other States are likewise classified, even though not formally incorporated as municipalities.

In addition to the classification of the population as urban and rural, the rural population is further subdivided into rural-farm and rural-nonfarm, on the basis of the replies to a question reading "Does this family live on a farm?" The rural-farm population includes all persons living on farms in the rural areas. The rural-nonfarm or "village" population is made up largely of persons living in small towns or villages, both incorporated and unincorporated, though in many areas there are considerable numbers of families living in the open country but not on farms.



In making comparisons between foreign countries in regard to the proportions of their natives who have settled in urban and in rural communities, respectively, consideration should be given to the fact that many of the immigrants from the northwestern European countries and from Germany came to the United States at a time when land was to be had free or at low cost, while most of the immigrants from central Europe, except Germany, and from eastern and southern Europe have arrived during a more recent period, when there has been comparatively little conveniently located and fertile land available for free settlement or obtainable at low prices. As a result, large numbers of the immigrants from northwestern Europe and from Germany went to rural localities, while most of the immigrants from the remainder of Europe have settled in urban communities, despite the fact that many of them were farmers in their native countries.

[1] Adjusted figures. The white population as classified in 1920 included 700,541 persons (estimated) who would have been classified as Mexicans in 1930; 243,181 were native and 457,360 were foreign born, and these figures have been deducted from the white population as reported in 1920. (See text, p. 225.)

[1] Persons reported in 1910 as of Polish mother tongue born in Germany (190,096), Austria (329,418), and Russia (418,370), have been deducted from the respective countries and combined as Poland for comparison with number reported in other years as born in Poland. (See text, p. 226.)

[2] Albania included with Turkey in Europe in 1910.

[3] Turkey in Asia included with Turkey in Europe prior to 1910.

[4] Includes 4,639 persons reported in 1910 as born in Serbia and 5,374 in Montenegro.

[5] Newfoundland included with Canada prior to 1910.

CHAPTER 6.—COUNTRY OF ORIGIN OF THE FOREIGN WHITE STOCK

INTRODUCTION

The term "foreign white stock" is used in the Census Reports to indicate the combined total of three classes, namely, the foreign-born white, the native white of foreign parentage (both parents foreign born), and the native white of mixed parentage (one parent native and the other foreign born). In most of the tables the two native classes are combined under the term "Native white—Foreign or mixed parentage."

The inquiry as to birthplace of parents, on which is based in part the assignment of the foreign white stock to country of origin, was first made in the census of 1880, but the data then secured were not completely tabulated. The earliest published statistics pertaining to this inquiry are those for 1890. Since so large a proportion of the population of foreign birth or parentage in the United States is white, statistics as to country of origin are here presented for the white population only. The most important of the other groups is represented by the Mexican population, practically all of which is of Mexican origin. The Chinese population is likewise practically all of Chinese origin, and the Japanese population of Japanese origin. Even if the nonwhite population were relatively more important, therefore, it would not call for any detailed statistics regarding country of origin.

By reason of its growing importance the Mexican element in the population was given a separate classification in the census returns for 1930, having been included for the most part with the white population at prior censuses. The instructions given to enumerators for making this classification were to the effect that "All persons born in Mexico, or having parents born in Mexico, who are not definitely white, Negro, Indian, Chinese, or Japanese, should be returned as Mexican." Under these instructions 1,422,533 persons of Mexican birth or Mexican stock were returned as Mexican in 1930, and 65,968 persons of Mexican birth or parentage were returned as white. Using as a basis the 1920 returns for persons born in Mexico and natives having one or both parents born in Mexico, it has been estimated that there were in that year 700,541 persons who would have been classified as Mexican under the 1930 instructions. This number includes 243,181 natives of foreign or mixed parentage and 457,360 foreign born. In the tables showing comparative data the 1920 figures for the white population have been adjusted by deducting these estimates, and similar adjustments have been made for 1910.

The relative importance of the several elements in the foreign white stock is shown in Table 1.

TABLE 1.—TOTAL FOREIGN WHITE STOCK IN THE UNITED STATES, BY NATIVITY AND PARENTAGE: 1930, 1920, AND 1910

NATIVITY AND PARENTAGE	NUMBER			PER CENT DISTRIBUTION		
	1930	1920 [1]	1910 [1]	1930	1920	1910

Foreign-born white	13,366,407	13,255,394	13,134,312	34.5	37.1	41.2
Native white—						
Foreign parentage	16,999,221	15,521,835	12,812,090	43.9	43.5	40.2
Mixed parentage	8,361,965	6,921,188	5,929,470	21.6	19.4	18.6
Father foreign born	5,459,530	4,496,024	3,890,302	14.1	12.6	12.2
Mother foreign born	2,902,435	2,425,164	2,039,168	7.5	6.8	6.4

[1] Adjusted figures; see text, above.

Country of origin.—The classification of the 1930 population both by country of birth and by country of birth of parents, so far as concerns European countries, has been made on the basis of postwar geography. The 1920 tabulations of country of origin were based on the pre-war boundaries of European countries, mainly by reason of the difficulty in securing correct returns on the postwar basis for the parents of the persons enumerated. The 1930 figures for those countries affected by changes resulting from the World War are therefore not comparable with those presented in the Census Reports for 1920. (For a discussion of the changes as they affect specific countries, see introduction to Chapter 5, Country of Birth of the Foreign Born.)

One other important change has been made in the classification of the native white population of foreign parentage by country of origin (country of birth of parents). In 1920 and in the earlier censuses native white persons of foreign parentage were assigned to a specific country of origin only when both parents were from that country. All cases of mixed foreign parentage (one parent born in one foreign country and the other in another) were placed in a group designated as of "Mixed foreign parentage," this group comprising about 10 per cent of the total number of natives of foreign parentage. In 1930 all persons of foreign parentage have been assigned to the country in which the father was born; and so far as possible, in the comparative tables, the figures for earlier censuses have been revised to this basis.[1]

[1] This revision is made on the basis of special tabulations showing country of birth of father by country of birth of mother which were made in 1920, 1910, and 1900. No such tabulation was made in 1930, nor could be made, because the country of birth of only one parent was punched on the population card.

The assignment of persons of mixed parentage to country of origin was made on the basis of the country of birth of the foreign parent. Persons having a native mother and a foreign-born father were assigned to the country of birth of the father; persons having a native father and a foreign-born mother were assigned to the country of birth of the mother. Separate figures are presented for these two classes of mixed parentage in most of the tables.

The 1930 statistics of the foreign white stock by country of origin are summarized in Table 2.

TABLE 2.—FOREIGN WHITE STOCK BY COUNTRY OF ORIGIN, BY NATIVITY AND PARENTAGE, FOR THE UNITED STATES: 1930

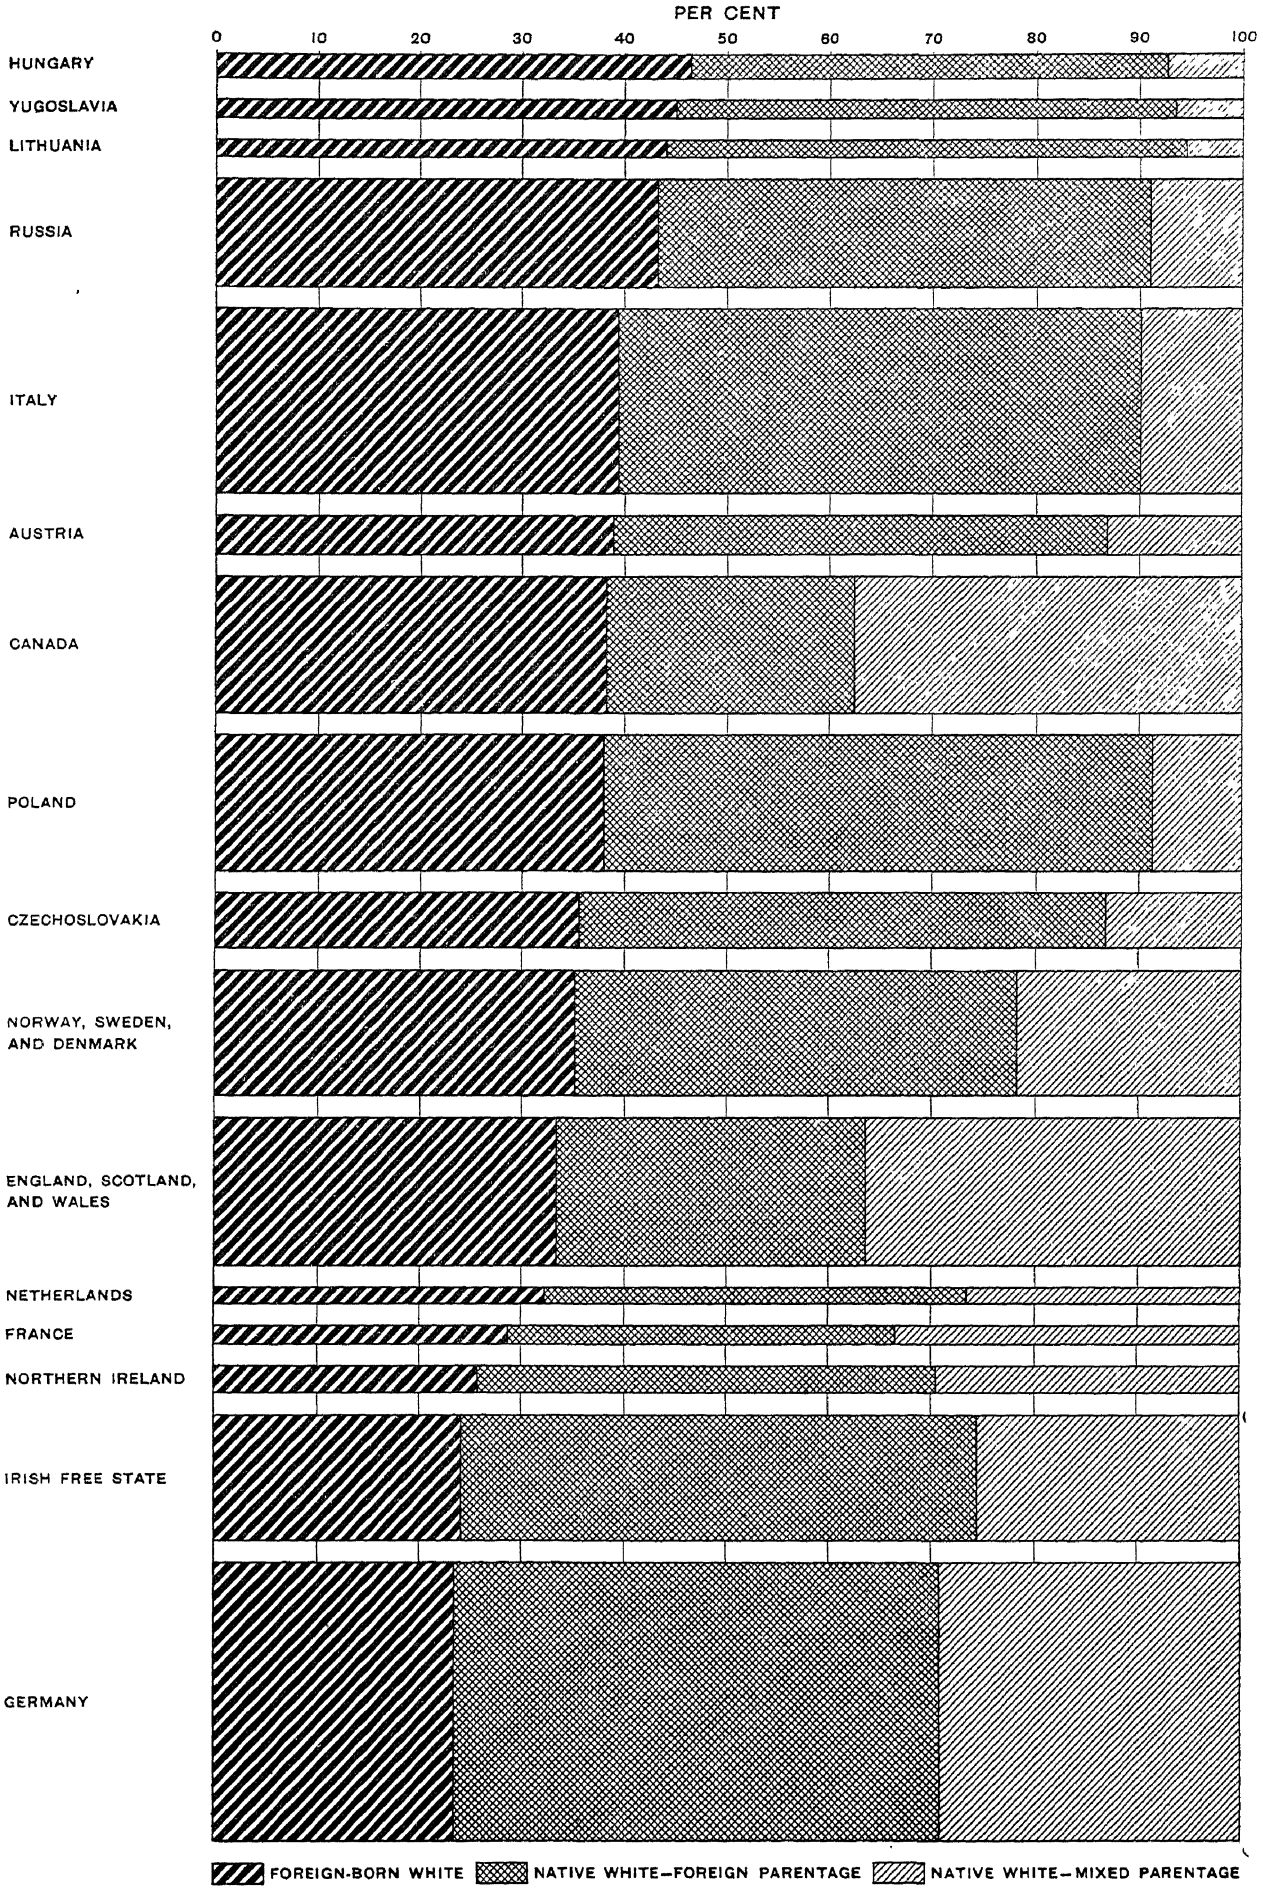
Urban, rural-farm, and rural-nonfarm population.—Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, towns (townships) are classified as urban if they have a population of 2,500 or more and certain urban characteristics; and a few large and densely populated townships in other States are likewise classified, even though not formally incorporated as municipalities.

In addition to the classification of the population as urban and rural, the rural population is further subdivided into rural-farm and rural-nonfarm, on the basis of the replies to a question reading, "Does this family live on a farm?" The rural-farm population includes all persons living on farms in the rural areas. The rural-nonfarm or "village" population is made up largely of persons living in small towns or villages, both incorporated and unincorporated, though in many areas there are considerable numbers of families living in the open country but not on farms.



The relative importance of the foreign white stock and of its major elements in the urban, rural-farm, and rural-nonfarm population is indicated by the figures presented in Table 3.

TABLE 3.—TOTAL POPULATION AND FOREIGN WHITE STOCK IN THE URBAN, RURAL-FARM, AND RURAL-NONFARM POPULATION OF THE UNITED STATES: 1930

TABLE 5.—COUNTRY OF ORIGIN OF THE FOREIGN WHITE STOCK, BY NATIVITY AND PARENTAGE, FOR THE UNITED STATES: 1890 TO 1930

[Persons shown as of "mixed foreign parentage" in the reports of censuses prior to 1930 have been distributed on the basis of country of birth of father. The table is limited to those countries and census years for which comparable figures are available]

COUNTRY OF ORIGIN AND CENSUS YEAR	Total foreign white stock	Foreign-born white	NATIVE WHITE OF FOREIGN OR MIXED PARENTAGE			
			Total	Both parents foreign	Father foreign	Mother foreign
All countries:

[1] The foreign-born white population in 1920 included 457,360 persons (estimated) who would have been counted as Mexican in 1930. In the adjusted figures these have been deducted from the 1920 foreign-born white population as reported and from the number of white persons reported as having been born in Mexico.
